Quince

Team G27

Own the Second Purchase

How we lift 90-day repeat from 24% to ~31%, inside the same $120M and with no discounts

Our retargeting and lifecycle plan, built on what we found in Adobe Customer Journey Analytics

Case Competition World Cup · Graduate Track · October 2026

We win the second purchase and lift repeat 24% → ~31%

Quince G27

Where Quince is Viral TikTok and Instagram moments brought Quince a huge wave of first buyers. **What's going wrong** But CAC is up 29% to $62, only 24% buy again within 90 days (peers: 30–35%), and 60% of the fixed $120M goes to renting reach on social platforms.

Our answer: we blend all three options. Retargeting gets us moving, owned channels bring buyers back, CJA holdouts decide every dollar

Lever 1 Capture every buyer

Quince Passport

A box card registers the piece; SMS at checkout and app tracking let us reach everyone

66%

of repeat buyers come from the 24.5% who engage; app users still come back at 21.5% after order one

Lever 2 Win the Golden Month

Material Journeys

A care guide on arrival, then a second category by day 21, moving cashmere buyers into home

2.7×

more week-2 repeat for engaged buyers than for all buyers (directional: ~48 buyers a week)

Lever 3 Never pay twice

Never Pay Twice Engine

Daily CJA lists keep buyers we can already reach out of paid retargeting

23.0% vs 23.4%

retargeted vs organic repeat: the ads aren't buying loyalty

24% → ~31%

90-day repeat, range 29.5-33% · target +6 pts

−12 to −14%

cost to win a customer on Exhibit J's definition, $62 → ~$54 · target −10%

$9M re-aimed

$7.5M goes to owned, net $0; +6 pts is worth ≈ $30M revenue a year (Exh. J)

Same $120M · No discounts, ever · We prove every move in Adobe CJA

Source: case sections 1, 3, Exhibits A, G, I, J; Adobe CJA A2, A3b, A5, A6, Cohort Table (appendix 9–13). The forecast is our base case (appendix 22); budget steps in appendix 21. Strict new-customer CAC ≈ −8% (appendix 26).

Renting reach costs 29% more than two years ago, and it keeps the fewest customers

Quince G27

THE MARKET WE'RE IN

~$180B	US online apparel, accessories and home; growing mid-single digits (case, illustrative)
17.1%	of US retail sales were online in Q2 2026 (US Census)
+12.2%	e-commerce growth vs +6.7% for all retail (US Census)

FOUR THINGS MAKING RENTED REACH MORE EXPENSIVE

35–50%	**Signal loss** of iOS users allow tracking, so retargeting sees less
+12%	**Ads cost more** Meta price per ad, year on year
≥3×	**Ads get too much credit** how far ad-lift estimates are often off (Gordon)
44.8	**Cautious consumer** record-low sentiment, so price can't be the answer

What it means for Quince: cost to win a customer
$48 → $62 · +29% in two years

THE CHANNELS WE RENT COST THE MOST AND KEEP THE FEWEST · EXHIBITS D, G (ILLUSTRATIVE)

	Share of the $120M	Avg. CAC	90-day repeat
Paid social prospecting	48%	$74	18%
Paid search	18%	$58	23%
Influencer / affiliate	13%	$52	21%
Paid social retargeting	12%	$31*	22%
Organic / direct / SEO	not a paid line	$9	35%

peers 30–35%

*Retargeting CAC counts media cost only; nobody has tested what it really adds (Exhibit D).
Organic customers are earned, not bought.

Owned channels are underfunded: app buyers repeat **38%** and email/SMS **29%** vs 13% web-only; 3-year LTV **$410 vs $155**. Yet owned gets **5%** of the $120M.

So what: renting reach keeps getting dearer while owned customers keep paying back, so we move spend to owned inside the same $120M

Source: case §2, §3, Exhibits B, D, E, G, H (illustrative); US Census (Q2 2026); Adjust (Q2 2025); AppsFlyer (Apr 2025); Meta Q2 2026 results; Gordon et al. (2019); UMich Surveys of Consumers (May 2026). Links in appendix 27.

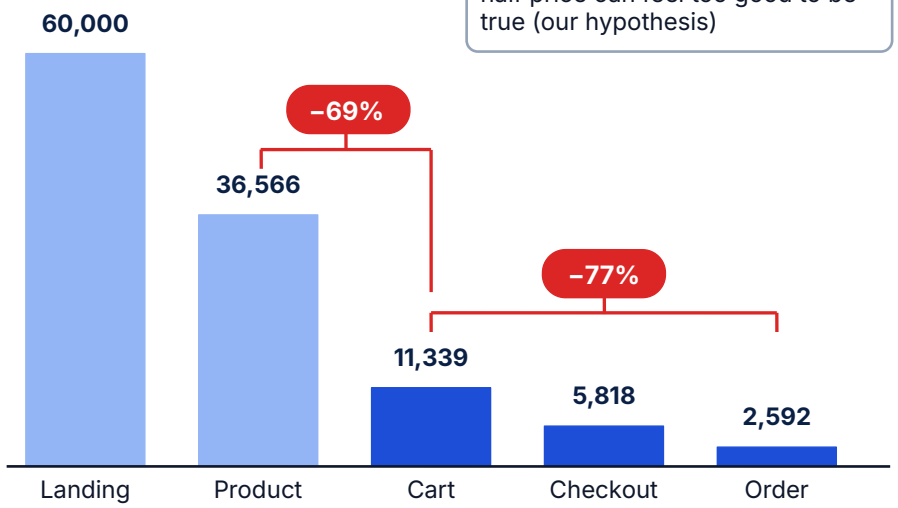

77% of carts stall, yet the 25% of buyers who engage make up 66% of repeaters

Quince G27

Where the funnel breaks

People at each step (Fallout)

Price signals quality: cashmere at half price can feel too good to be true (our hypothesis)

Only 1 of ~5,500 carts that stop before checkout gets a follow-up email (Flow)

Who comes back

Repeat rate in the CJA window

Engaged with email, SMS or app (A2) **28.1%**

App after order one (A5, n=265) **21.5%**

SMS after order one (A5, n=315) **11.7%**

Not engaged (A2) **4.7%**

24.5% of buyers engage, yet they are **66%** of repeat buyers (A2)

When, and what they buy next

Repeat orders in week 2 (Cohort)

Engaged **5.6%**

All buyers **2.1%**

Half of engaged repeats land in weeks 1–4

Repeat by category touched (A6)

Home **20.8%**

Jewelry **19.5%**

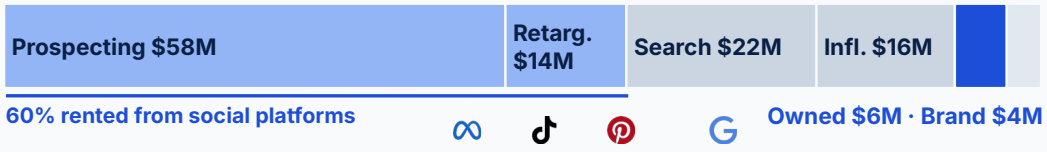

Beauty **18.5%**

Cashmere **13.7%**

Cashmere: touched by 40.7% of buyers, repeats least

Where the $120M goes

FY2026 (Exhibit G)

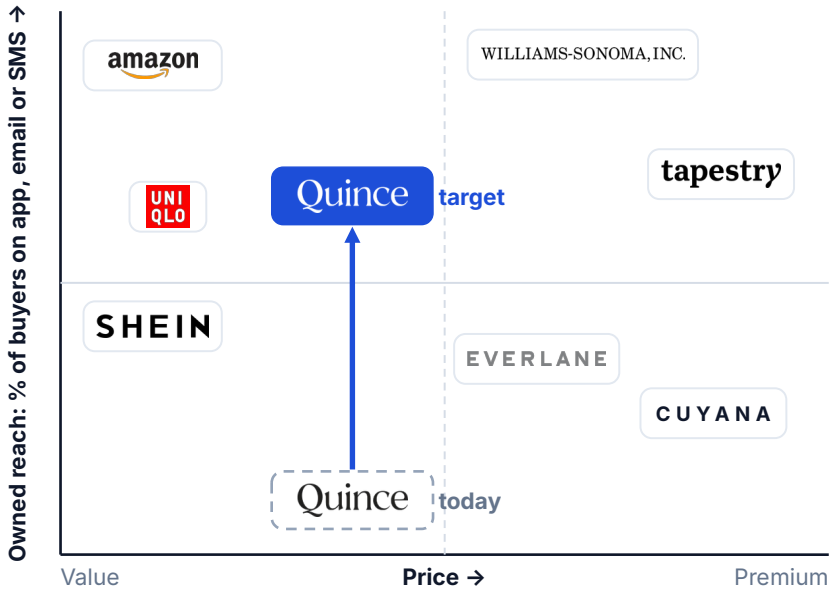

5% owned: $1.43 per active customer (A, G). **$31** retargeting CAC is untested, and may count sales that would have happened anyway (D)

Source: Adobe CJA, Quince Case Data View, 1 Jan–30 Apr 2026 (Fallout A1, segments A2/A5, Flow A4, Cohort Table, A6), appendix 9–13; case Exhibits A, D, G. CJA repeat covers ~3 months, so we use it for relative gaps, not against the case's 24%.

Rivals can copy a discount overnight, but not factory-direct cost plus buyers who opted in

Quince G27

Price vs depth of owned relationship (our judgment)

What a rival could copy, and how fast

A 20% discount	Overnight
Follow-up messages and ad exclusions	A quarter or two
Factory-direct cost + opted-in buyers	Years

WHAT THREE RIVALS TEACH US

amazon

Paid reach is an auction we can't win
Amazon's ad business: $19.8B a quarter, +26%

EVERLANE

Owned channels alone aren't a moat
Everlane had strong email and SMS, and still ended up selling to Shein

WILLIAMS-SONOMA, INC.

Trust has to come from proof, not comparisons
Williams-Sonoma sued Quince over "dupes"

Our move: straight up the map

We keep the factory-direct price and build the relationship rivals can't buy

Source: case Exhibit M, section 7; Amazon Q2 2026 results; Bloomberg Law, NPR (May 2026); The Fashion Law (30 Sep 2026); Williams-Sonoma 10-K. Map positions and copy speeds are our judgment; full rival table in the case pack.

The customer data is ready; we close three gaps for $4.8M inside the owned line

Quince G27

WHAT QUINCE ALREADY HAS

Stitched person ID across web, app, email and SMS (Exhibit L)

THREE GAPS WE FUND AS THE OWNED LINE GROWS $6M → $13.5M

Activation
Getting CJA audiences into messages and ad platforms

$1.5M
Month 3 · Marketing ops

A team for follow-up messages, plus fresh creative
Today it's built for mass email blasts

$2.8M
Month 6 · CMO

Marketing and analytics working as one
A weekly meeting that judges every channel on what it truly adds

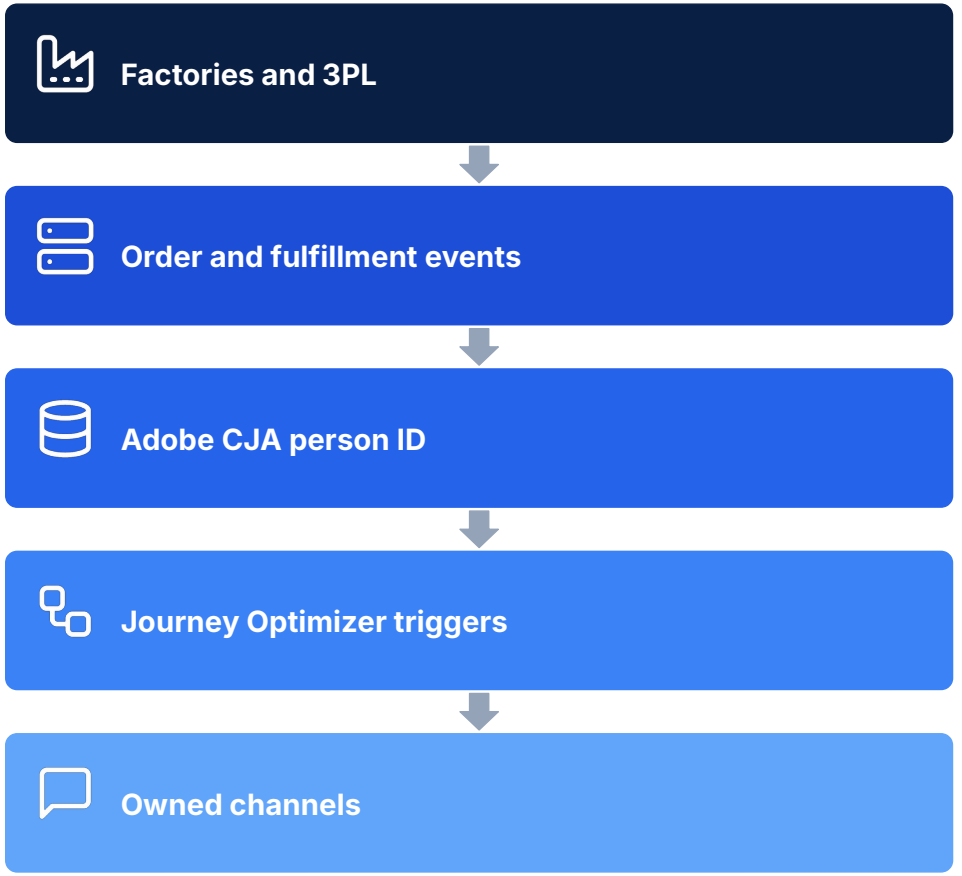

$0.5M
Month 3 · CMO + CFO

Partly there, and we fix it in the pilot: app tracking · 3PL order events · SMS consent split

The pilot runs on Option A's $2–3M inside today's $6M; the rest follows only as each step proves itself.

How shipping events become journeys

Material Journeys, end to end (appendix 24)

Source: case sections 1, 3, 4, 7; Exhibits A, I, K, L; costs, owners and dates from our plan (owned line $6M → $13.5M, appendix 21). Adobe CJA builds the audiences; Real-Time CDP or Journey Optimizer sends them out.

We test for 90 days in the South, and the first $4M moves only if the holdout proves it

Quince G27

WHAT WE DO · WHY	IN THE SOUTH PILOT · SET UP WK 1–4, LAUNCH 5–8, MEASURE 9–12	WHAT COUNTS AS SUCCESS AT MONTH 3	WHO OWNS IT · WHO PAYS
1 Capture every buyer 77% of carts stall; only 24.5% of buyers engage	**Quince Passport** Box card, SMS opt-in at checkout, order tracking in the app, and cart reminders at 1h and 24h	**Twice as many buyers engaged as in the holdout** our aim: from 1 in 4 to 1 in 2 buyers engaged	**CRM + app** Option A, inside $6M
2 Win the Golden Month Repeat peaks in week 2; cashmere repeats least, 13.7%	**Material Journeys v1** The delivery email sends a care guide; we suggest a second category by day 21	**30-day repeat 2 points above the holdout** we check it weekly in the CJA Cohort Table	**CRM team** Option A, inside $6M
3 Never pay twice Retargeted buyers repeat 23.0%, same as organic 23.4%	**Never Pay Twice Engine** Every day we send Meta, Google and TikTok the buyers we can already reach, so they stop seeing ads	**At least as many orders per $ as the holdout** guardrail: new customers drop by less than 2%	**Paid media** $14M line, $0 extra

THEN WE MOVE MONEY ONLY WHERE THE HOLDOUT PROVES IT · 14 PROGRAMS, 0 DISCOUNTS

South pilot
Weeks 1–12 · 10% holdout
3 flagships start; 11 wait

Retargeting → owned
Month 3 · $4M
if Gate 1 passes

Search → owned
Months 4–6 · $3M
if a regional search test proves it

Prospecting → owned
Months 7–9 · up to $2M
only if it's shown to be over-credited

Month 9 check → target
Month 9 ≥ 28%
~31% repeat by month 18

Source: case Exhibits G, I, N; Adobe CJA A1, A2, A3b, A6, Cohort Table; our plan. 3 flagships in the pilot; 11 more programs wait for Gate 1 (appendix 20). We start in the South (fastest new-customer growth, lower email/SMS opt-in, Exhibit N), then the Midwest.

Engaged buyers (inclusion segment)

Engaged buyers repeat 2.7× more in week 2 than all buyers (5.6% vs 2.1%), and half their repeats land in weeks 1–4. Cohorts are small (~48 engaged buyers a week), so we read this as directional

Source: Adobe CJA, Cohort Table, inclusion and return Orders ≥ 1, weekly, 1 Jan–30 Apr 2026; right panel uses the Engaged inclusion segment.

Almost no stalled cart gets a follow-up email

Quince G27

Of 11,610 cart paths, 6,088 go on to checkout and only 1 is followed by an email. A simple cart reminder is our fastest win

Source: Adobe CJA, Flow from add_to_cart (next step), Person container, 1 Jan–30 Apr 2026. 11,610 = path views; 11,339 = people (Fallout).

App users come back at double the rate of SMS users

Quince G27

A2 · Repeat by engagement (any time)

A5 · Engaged after order one

A2 Repeat by engagement

Segments Page: 1/ 1 Rows: 400 1-4 of 4	Buyers People Jan 1 – Apr 30 2,592	Repeat buyers People Jan 1 – Apr 30 271
1. Engaged	636 24.5%	179 66.1%
2. SMS engaged	319 12.3%	59 21.8%
3. Email engaged	74 2.9%	74 27.3%
4. App engaged	266 10.3%	69 25.5%

A5 Engaged before repeat

Segments Page: 1/ 1 Rows: 400 1-4 of 4	People Jan 1 – Apr 30 674
1. Order then App	265 39.3%
2. Order then App then Order	57 8.5%
3. Order then SMS	315 46.7%
4. Order then SMS then Order	37 5.5%

Engaged buyers are 24.5% of buyers but 66% of repeaters (A2 overstates this, since owned visits only log at purchase). After order one, app users still repeat 21.5% vs 11.7% for SMS (A5, the cleaner test)

Source: Adobe CJA, freeform tables with engagement segments (A2) and sequential segments after order one (A5, n = 265 app, 315 SMS), 1 Jan–30 Apr 2026.

Why we blend paid speed with owned retention

Quince G27

B — Option B
Paid precision and suppression

- ✓ Results in weeks, at no extra cost
- ✗ On its own: exposed to signal loss, and builds no lasting relationship

A — Option A
Owned lifecycle precision

- ✓ Cheapest way to reach people; unaffected by iPhone privacy limits
- ✗ On its own: limited to today's list, where only 1 in 4 buyers engage

C — Option C
Attribution-based reallocation

- ✓ The way we decide, for good
- ✗ On its own: 6–12 months before anyone trusts it, and hard to adopt

Shows results fast
Savings held in the $14M line until a holdout proves them

Builds the habit
We grow the list, and follow-ups earn the second order

Shows what works
Runs from day one and decides each budget move

B gives us fast proof, A's owned reach shields us from B's signal loss, and C's holdouts tell us whether either is working

→ **We scale only what beats the CJA holdout, and stop anything that doesn't**

Source: case section 4 (Options A, B, C), Exhibit I (cost and timing) and Exhibit K (risk matrix); our analysis.

Four root causes behind the 24% repeat rate

Quince G27

Why is 90-day repeat 24% and blended CAC $62 on a fixed $120M?

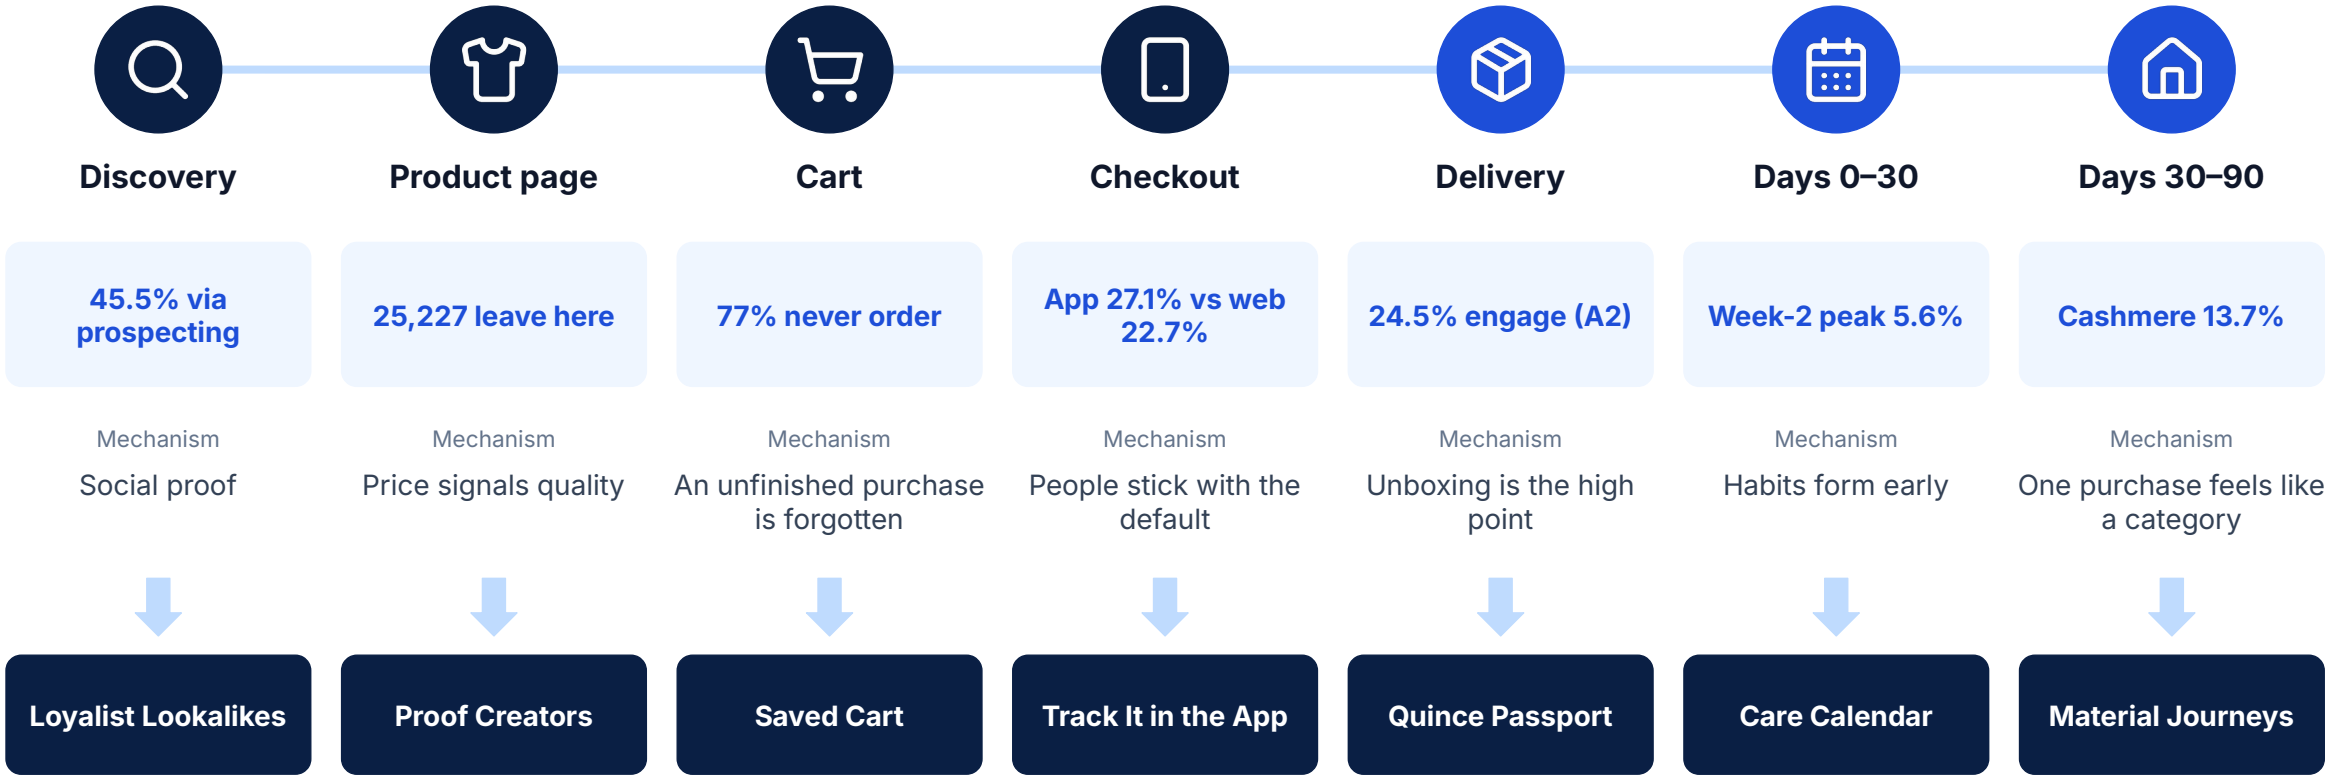

Money	**We may be paying for sales we'd get anyway** Retargeted buyers repeat no better than organic: 23.0% vs 23.4% (A3b); a holdout will tell us	**Never pay twice**
Customer mind	**One-product buyers** Cashmere is touched by 40.7% of buyers but repeats 13.7% (A6)	**Win the Golden Month**
Customer journey	**Shoppers drop off before buying** 77% of cart adders never order; 1 of ~5,500 cart paths stopping before checkout gets an email (A1, A4)	**Capture every buyer**
Brand trust	**Found us, but don't trust us yet** 25,227 people leave after a product view (A1)	**Trust, in every lever**

→ **Repeat = engaged share × engaged repeat + non-engaged share × non-engaged repeat; CAC = $120M ÷ new customers**

Source: our analysis; Adobe CJA panels A1–A6 and A3b; case Exhibits D and G.

We ask for the relationship when the box opens

Quince G27

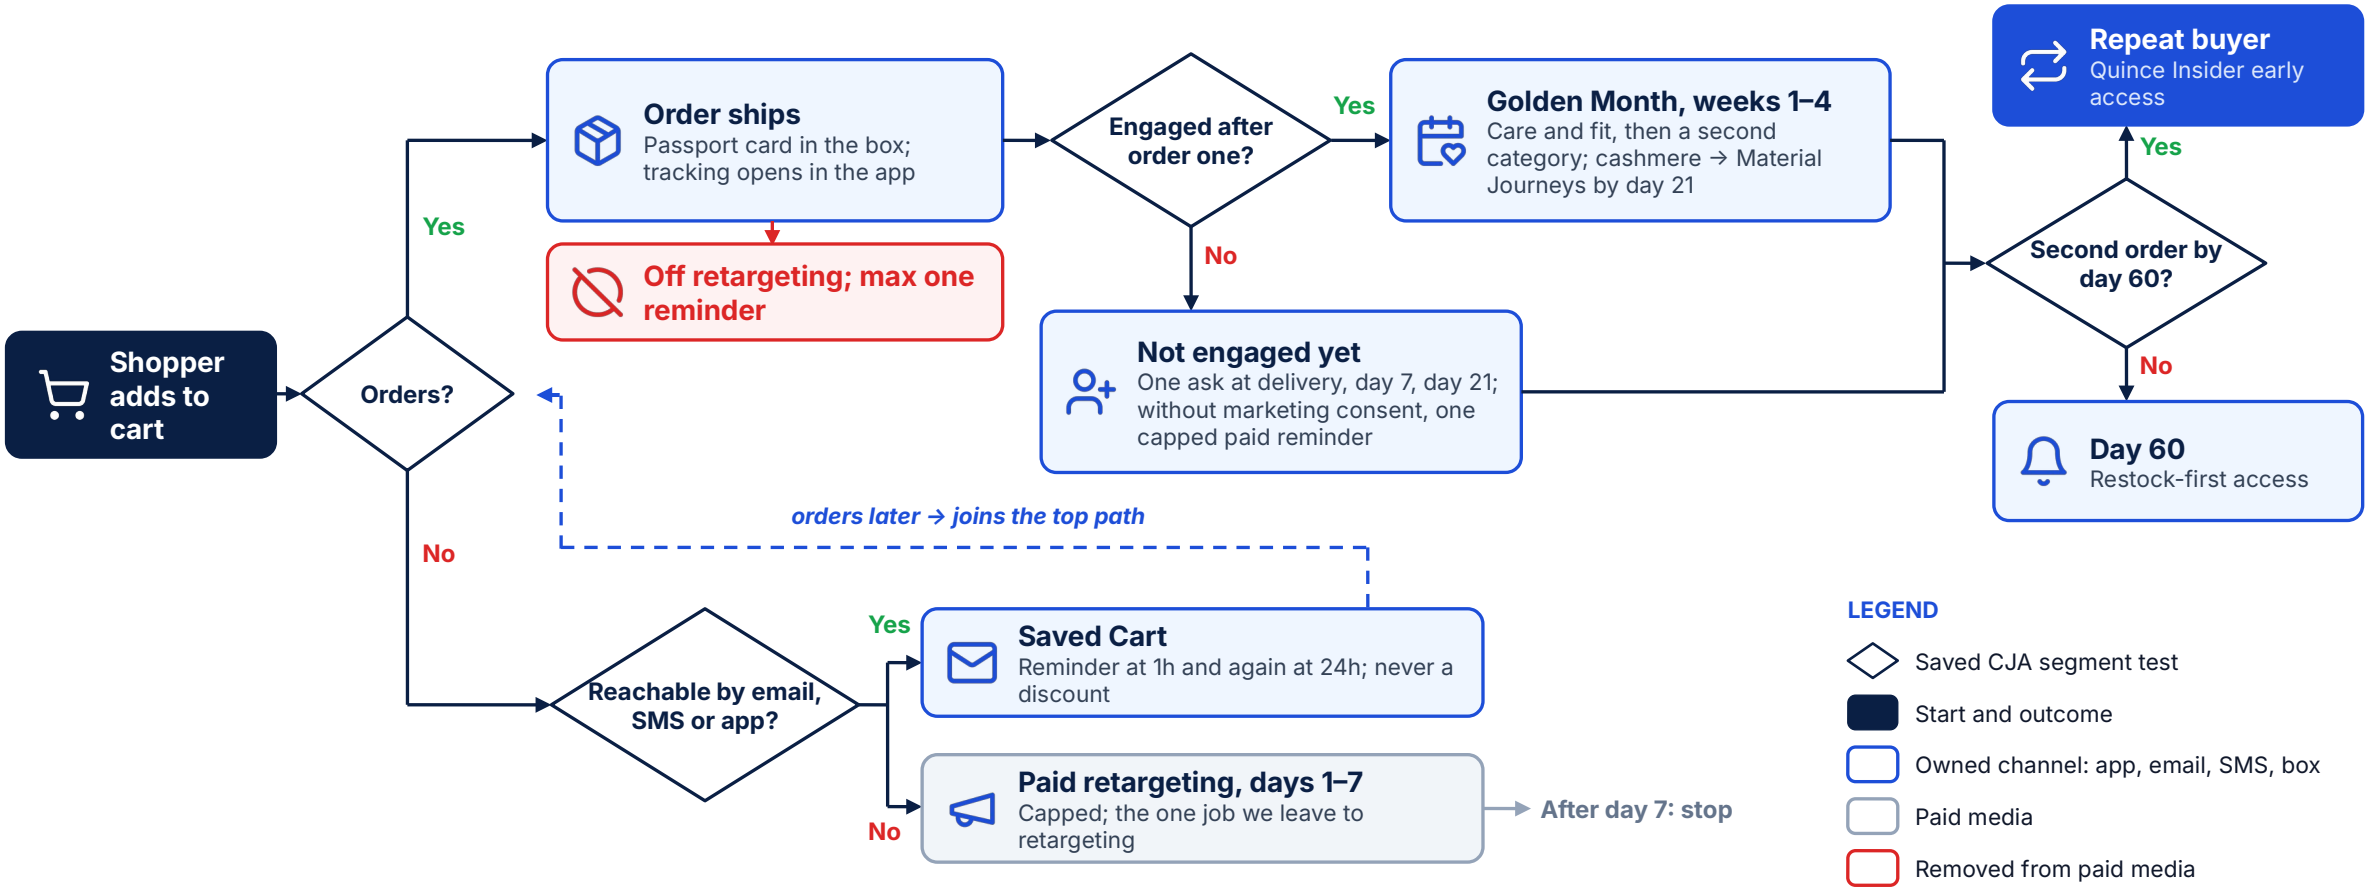

Trust peaks when the parcel opens, so that's when we ask for the relationship, never with a discount

Source: Adobe CJA panels A1, A2, A4, A5, A6 and Cohort Table; the mechanisms are our hypotheses, and the pilot tests them.

Every cart: owned channels first, paid second

Quince G27

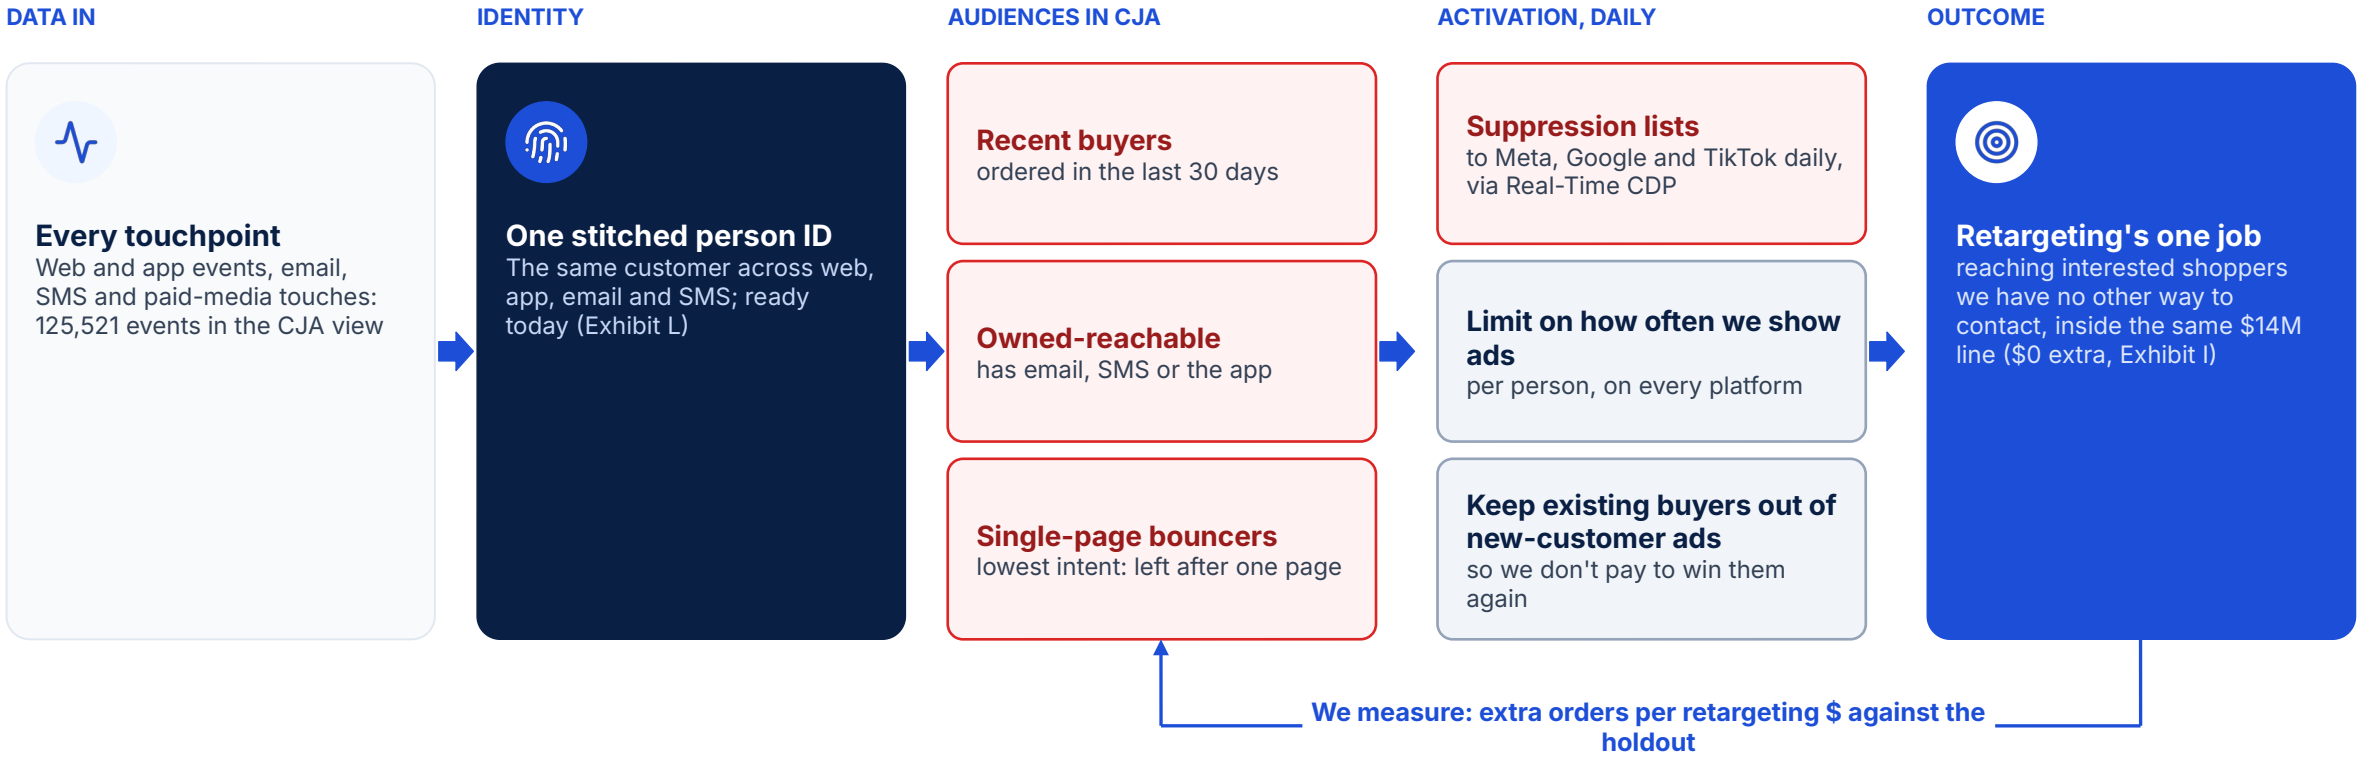

Each diamond is a saved CJA segment, so the same rule sends the message and measures it

Source: Adobe CJA segments (A1, A2, A4, A6, Cohort Table); our targeting design. Message timings are our pilot choices, tested against the holdout.

We stop paying for ads to customers we already have

Quince G27

Why test it: retargeted buyers repeat no better than organic (23.0% vs 23.4%, A3b) and attribution barely moves, so only a holdout can show what retargeting is worth. We leave the prospecting budget, which brings 45.5% of buyers, unchanged.

We stop paying to reach customers we can already message; the prospecting budget stays the same

Source: Adobe CJA, Quince Case Data View (125,521 events, 1 Jan–30 Apr 2026), segments A3b and A1; case Exhibits D, I, L; our design.

Our weekly loop: how analytics and growth work together

Quince G27

1 Diagnose

Option C

Read Fallout, Flow, Cohort Table and Attribution IQ for each person across all channels

OWNER **Head of Analytics**

2 Target

Options A + B

Turn what we learn into saved CJA groups: cart abandoners, engaged buyers, cashmere-first buyers, recent buyers

OWNER **Analytics + CRM**
RHYTHM Weekly

3 Activate

Options A + B

Send those groups to our follow-up messages and to the ad platforms' exclusion lists

OWNER **Marketing ops**
RHYTHM Daily sync

4 Prove

Option C

Check every move against a random 10% holdout in the South pilot

OWNER **Head of Analytics**
RHYTHM Weekly council

5 Reallocate

Option C

Move money between budget lines only when the holdout proves it; otherwise it stays put

OWNER **CMO + CFO**
RHYTHM Gates: months 3, 9

What CJA proves tells us where to look next and what to do next

Why it matters: On its own, Option C takes 6–12 months to trust (Exhibit I). Running it as a weekly loop from day one lets A and B act within weeks, while C decides every budget move.

Growth and analytics share one workspace, one holdout and one way of deciding

Source: case section 4 (Options A, B, C), Exhibits I and L; owners and rhythm are our operating design.

14 programs, zero discounts, no new budget

Quince G27

1 Capture every buyer

Quince Passport
A card in every box: scan it to register the piece for care tips, easy exchanges and restock alerts, and we ask for SMS or the app

Track It in the App
Order tracking opens in the app, where carts convert at 27.1% vs 22.7% on web (A1)

Saved Cart
A reminder within hours, with fit and return promises, never a discount

Restock-First Waitlist
"Text me when it's back" on real sell-outs gives people a reason to opt in

2 Win the Golden Month

Material Journeys
Before it arrives, we explain how the material is made and how to care for it (no supplier names); by day 21, a second category (cashmere → home)

Care Calendar
Seasonal care reminders keep us in touch with cashmere buyers

Gift Ledger
Customers save gift dates, and we send picks 14 days before

Quince Insider
Early access earned by engagement, not spend

Beauty Refill
Refill reminders timed to each product's use cycle

Cashmere Second Life
Take-back for recycling, rewarded with early access

3 Never pay twice

Never Pay Twice Engine
Daily CJA lists tell Meta, Google and TikTok which buyers we can already reach, so we stop paying to retarget them

Loyalist Lookalikes
We model new prospects on repeat buyers, not one-time buyers

Proof Creators
Wear-tests and fabric close-ups instead of discount codes

The Fitting Room
A members-only pop-up for app users, one city, one season, to try fabrics in person; light on assets, no store

0 discounts

14 programs tested against a holdout

$0 new budget

Source: our strategy. Each program sits in one lever, targets one behaviour, and has a KPI we can read in CJA. None of them cuts price.

We move $9M out of rented lines, but only when holdouts prove it

Quince G27

LINE: TODAY → TARGET	WHAT CHANGES	EVIDENCE	DECISION RULE
Paid social prospecting  **$58M → $56M if proven**	Months 7–9: South test on ~$16.2M; existing buyers excluded, lookalikes on repeaters	Brings 45.5% of buyers (A3b) but its buyers repeat least, 18% (Exhibit D)	**Months 7–9: up to $2M moves to owned only if the holdout shows over-credit; else stays $58M**
Paid search  **$22M → $19M**	Months 4–6: South geo test on ~$6.2M of branded terms	Brand-keyword ads showed no short-term lift at eBay (Blake et al. 2015)	**Months 4–6: $3M moves ($1.5M owned, $1.5M creators) if organic recovers the traffic**
Influencer / affiliate  **$16M → $17.5M**	Briefs shift to proof: wear-tests and fabric close-ups	Hypothesis; 69% product → cart drop (A1)	**+$1.5M from search for proof creators, with the search step**
Paid social retargeting  **$14M → $10M**	Re-aimed inside the line: suppression and frequency caps	No repeat advantage over organic, 23.0% vs 23.4% (A3b); the holdout tests incrementality	**Month 3: $4M moves to owned if Gate 1 passes; the holdout sizes anything more**
Email, SMS, app  **$6M → $13.5M**	Pilot: Option A's $2–3M inside $6M; grows as tranches prove (team, activation, app, creative)	Engaged buyers repeat 28.1% vs 4.7% (A2)	**Receives each step: owned share 5% → 11%**
Brand / other  **$4M, unchanged**	Unchanged; $1.0M funds one Fitting Room test	Asset-light pop-up, no store	**One-season test; stopped if attendee repeat doesn't beat a matched holdout**

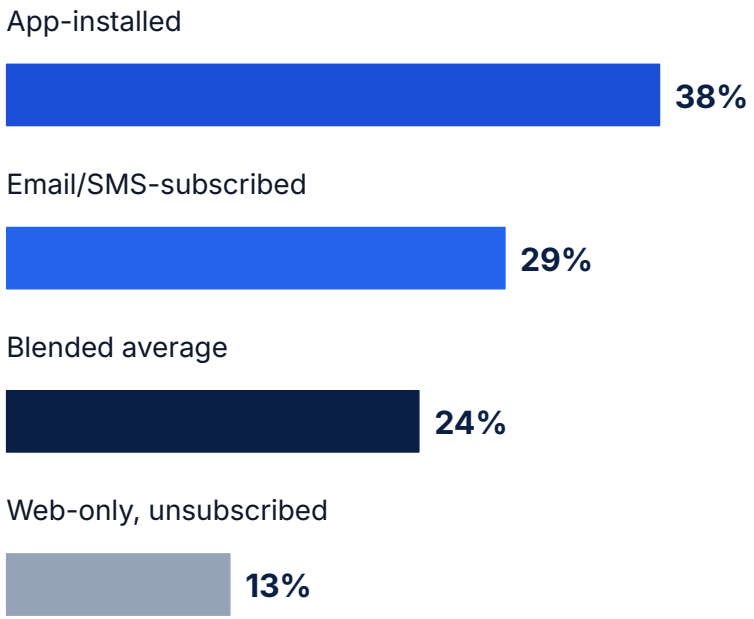

Net change: $0. Up to $9M leaves rented lines in three steps, and each one moves only if its holdout proves it

Source: case Exhibits G (budget), I (cost by option), D (channel CAC), N (regions); Adobe CJA A3b, A2 and Attribution IQ. Targets are our base case; South test cells assume spend follows the customer split (28%). Each step moves only on holdout proof.

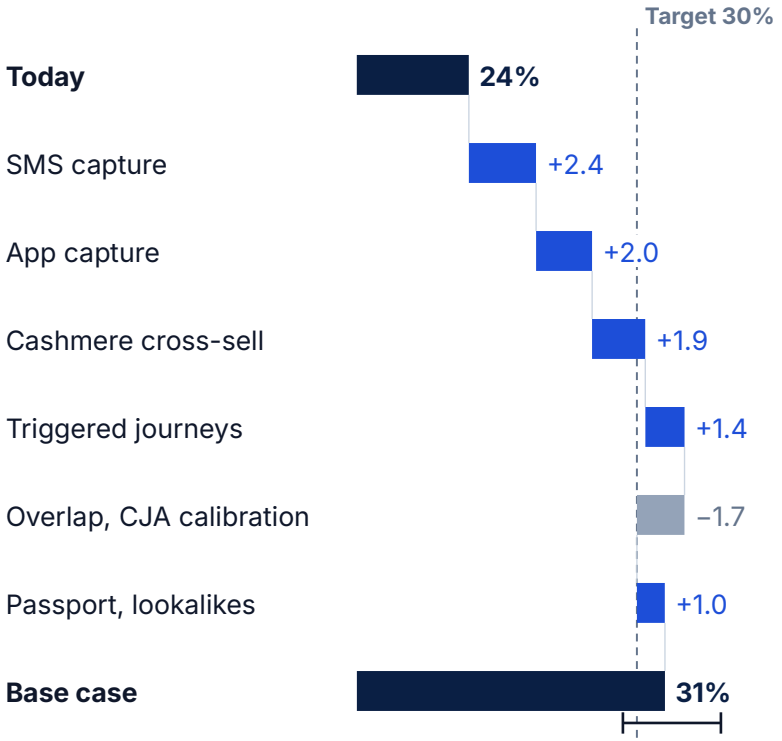

How our levers add up to ~31% repeat

Quince G27

90-day repeat by engagement (Exhibit E)

How the levers reach ~31% (base case)

Axis starts at 20%. Gross lever effects come from our CJA-calibrated model; we take 25% off new levers for overlap (estimates).

WHAT +6 POINTS IS WORTH (EXHIBIT J)

~250,000
incremental repeat orders a year

~$30M
incremental revenue

~$13.5M
contribution at ~45% margin

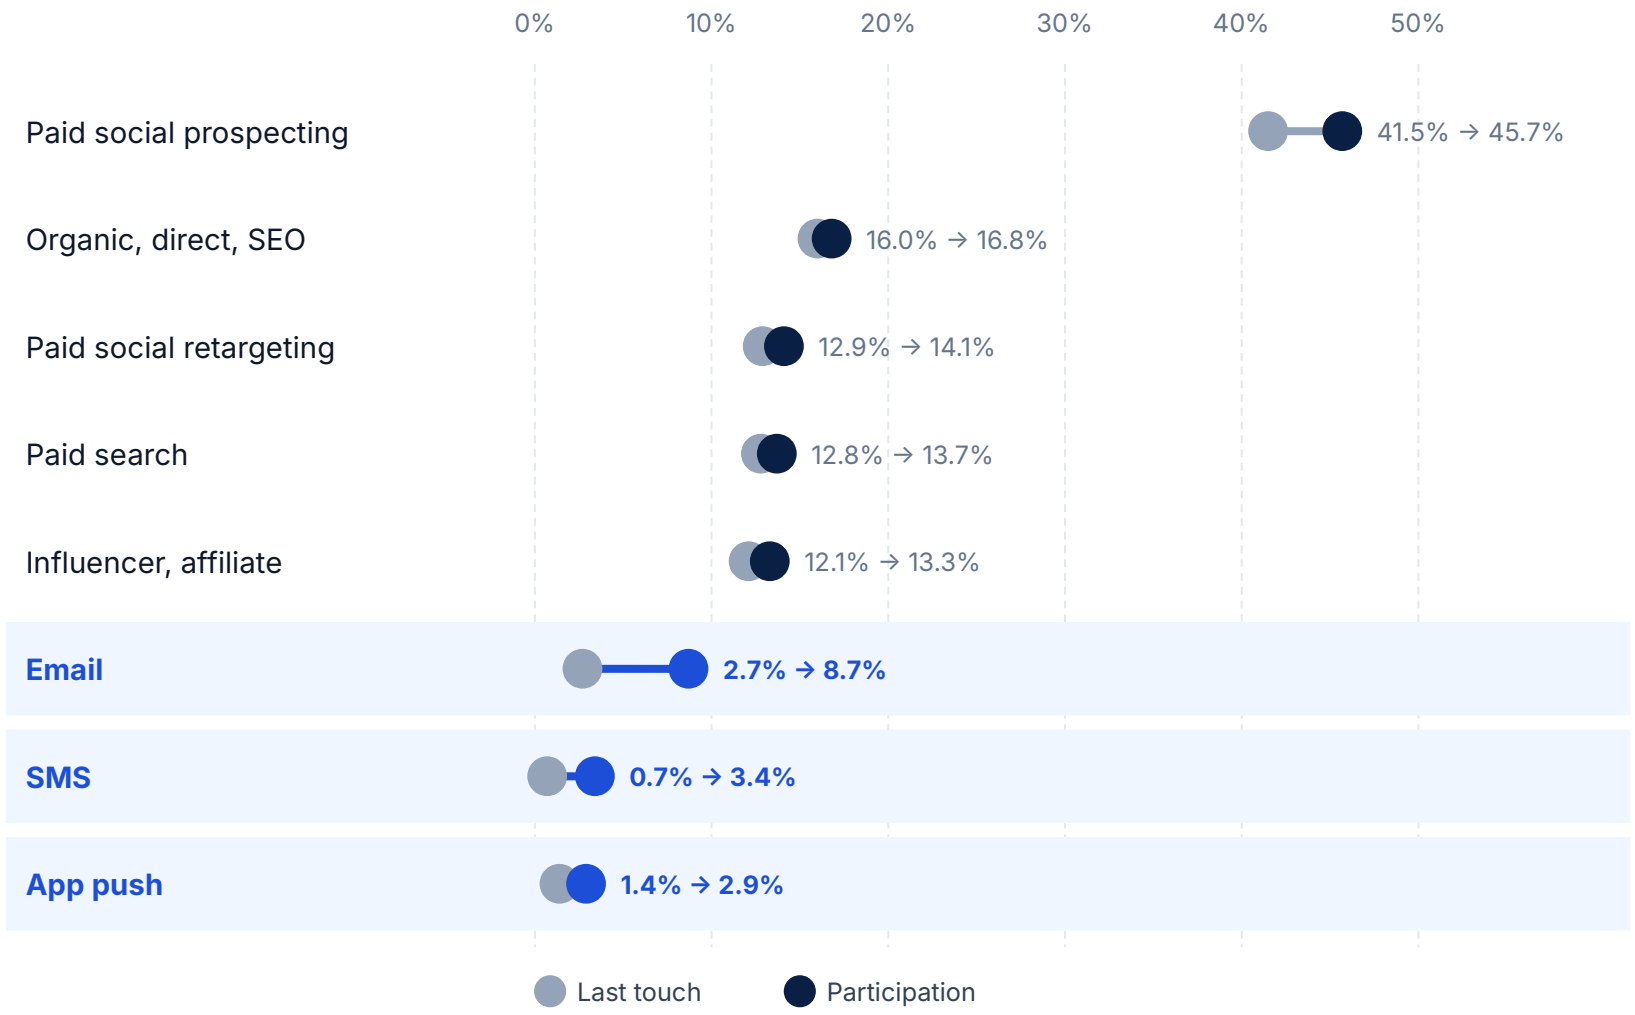

~10–12%
lower effective CAC at +6 pts; −12 to −14% at our +7 (strict ≈ −8%)

Base case ~31% (range 29.5–33%) clears the +6 target; Gate 2 checks ≥ 28% at month 9

Source: case Exhibits E (90-day repeat by engagement type) and J (impact of a 6-point gain); Adobe CJA A2, A5; lever effects are our estimates calibrated on CJA, not case figures.

Owned channels touch 15% of revenue but get credit for ~5%

Quince G27

4.8% → 15.0%

Owned channels: last-touch credit vs up to 15.0% of revenue they appear in (not additive)

12.9 · 12.4 · 12.5%

Retargeting under last touch, first touch and linear: attribution can't settle it, but holdouts can (Gordon et al. 2019)

Source: Adobe CJA Attribution IQ, Order Revenue ($337,044), Marketing Channel, Person container, 90-day lookback, 1 Jan–30 Apr 2026.

Material Journeys runs on order-linked shipping events

Quince G27

Factories and 3PL partners
Shipment created · customs cleared · out for delivery · delivered

↓

Order and fulfillment events
One event stream per order, keyed to the order ID

↓

Adobe CJA: stitched person ID
Order ID → person; audiences; holdout assignment

↓

Activation and journey triggers
Pre-arrival material and care guide · delivery-day Passport and app ask · day-21 next category

↓

Owned channels
SMS · email · app push, under one frequency cap

v1 uses delivery emails; we build the full version in months 3–6

1 Month 3–4 Map and consent

- List the shipping milestones factories and 3PLs already emit
- Agree one order-ID key with operations
- Split transactional and marketing SMS consent with Legal (CCPA)

2 Month 4–5 Connect

- Stream events into CJA: order ID → person ID
- Build audiences: in transit, delivered, day 21 with no second order
- Assign the 10% randomized holdout

3 Month 5–6 Launch and read

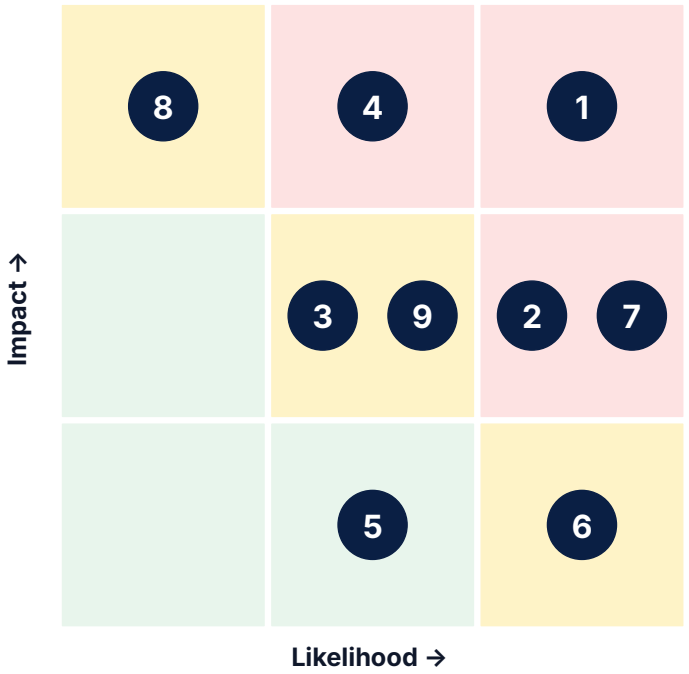

- Pre-arrival guide: how the material is made and cared for
- Delivery-day Passport and app ask; day-21 second category
- Read results against the holdout every week

→ The tech work comes down to one thing: 3PL shipping events tied to an order ID

Source: case section 1 (M2C model), Exhibits L and N; our build plan. Month ranges are our plan, not case figures.

Nine risks we watch, each with a fix and a warning sign

Quince G27

1	**Results look better than they are**	**Mitigation:** Randomized 10% holdout **Early warning:** holdout gap shrinks
2	**Channel owners push back on cuts**	**Mitigation:** Scorecards on incremental revenue **Early warning:** escalations at the weekly council
3	**Message fatigue, unsubscribes**	**Mitigation:** Fewer, triggered sends **Early warning:** unsubscribes above pre-pilot rate
4	**Consent and privacy (CCPA)**	**Mitigation:** Transactional and marketing consent split **Early warning:** consent complaints
5	**The Fitting Room doesn't pay back**	**Mitigation:** One-season test **Early warning:** attendee repeat no better than a matched holdout
6	**A platform change cuts what we can see**	**Mitigation:** More owned reach; first-party lists **Early warning:** CPM or match-rate drop
7	**Creative fatigue**	**Mitigation:** Fresh creative funded by Option A **Early warning:** falling click and conversion rates
8	**Fewer new customers**	**Mitigation:** Prospecting budget unchanged; exclusions tested **Early warning:** weekly new customers vs plan
9	**Connecting CJA to the ad platforms runs late**	**Mitigation:** Start in month 0; manual list upload as fallback **Early warning:** suppression lists not live by week 6

Source: case section 7 and Exhibit K; likelihood and impact positions are our judgment.

Every number traces to the case, CJA or research

Quince G27

Case packet (illustrative)

- $120M budget and its six lines (Exhibit G); 4.2M active customers (A)
- CAC $48 → $62; repeat 24% vs 30–35% peers; targets +6 pts and −10% (section 3)
- Cart abandonment ~78% vs ~70% benchmark (C); retargeting CAC $31 (D)
- Repeat 38% / 29% / 13% by engagement (E); ~250K orders, ~$30M, ~$13.5M, ~10–12% CAC (J)
- Option A $2–3M inside the $6M owned line; B $0 within $14M; time to impact (I)
- Regions (N); ~$180B market (section 2); app 22% of sessions (A)

Adobe CJA (our sandbox)

- 60,000 → 2,592 people; 69% and 77% drop-offs; 25,227 = 36,566 − 11,339 (Fallout)
- 11,610 cart paths: 6,088 to checkout, 1 to email (Flow)
- 28.1% vs 4.7%; 24.5% of buyers, 66% of repeaters; 10.5% overall (A2)
- App 21.5% (n = 265), SMS 11.7% (n = 315) after order one (A5)
- Week 2: 5.6% vs 2.1%; half of engaged repeats in weeks 1–4 (Cohort)
- Category repeat, cashmere 40.7% (A6); 23.0% vs 23.4%, 45.5% (A3b); 4.8% vs 15.0% (AIQ)

Public data (cited)

- ATT opt-in 35% (Adjust, Q2 2025) to 50% (AppsFlyer, Apr 2025)
- Meta average price per ad +12% year on year (Q2 2026 results)
- Meta Advantage+ defaults (2025); TikTok US joint venture (Jan 2026)
- Consumer sentiment record low (UMich, 2026); apparel prices up with tariffs (Cotton Inc.)
- Shein to buy Everlane (May 2026); Amazon ads $19.8B, +26% (Q2 2026)
- Census: 17.1% online (Q2 2026); McKinsey 71%; Tapestry 6.8M; WSI v. Quince (2026)

Derived, or team design

- +29% = $62 ÷ $48 − 1; $1.43 = $6M ÷ 4.2M; 60% = ($58M + $14M) ÷ $120M
- 2.7× = 5.6 ÷ 2.1; a third = 4.8 ÷ 15.0; ~5,500 = 11,610 − 6,088 − 1
- +6 pts: 6 ÷ 25 = 24% (app), 6 ÷ 16 = 37.5% (email/SMS); ~29% and ~59% after A2→A5 haircuts; web-only ≥ 31% (38a + 29s + 13w = 24)
- Base case ~31% = 24 + 7.7 gross − 1.7 overlap + 1.0 new levers (EST); gates at months 3 and 9
- Timing (1h, 24h, delivery, day 7, 21, 60); 30-day recent buyers; gift picks 14 days ahead
- $9M = $4M + $3M + $2M (targets, appendix 21); South tests 28% (Exh. N) × $22M = ~$6.2M, × $58M = ~$16.2M

Case figures are the packet's illustrative estimates, never Quince disclosures. CJA figures come from our sandbox, 60,000 people, 1 Jan–30 Apr 2026.
