Quince

Team G27

Own the Second Purchase

Turning viral first buyers into repeat customers, inside the same $120M

Retargeting and lifecycle strategy · Grounded in Adobe Customer Journey Analytics

Case Competition World Cup · Graduate Track · October 2026

Win the second purchase inside the same $120M

Quince G27

Blend the case's three options: precise paid retargeting (B) starts it, owned lifecycle (A) builds repeat, CJA holdouts (C) decide every budget move

Lever 1 Capture every buyer

Every buyer into email, SMS or the app

★ **Quince Passport:** box card registering each piece for care and restock alerts

Only 24.5% of buyers engage, yet they are 66% of repeaters (A2)

Lever 2 Win the Golden Month

Care first, then a second category, weeks 1–4

★ **Material Journeys:** how the material is made and cared for, then cashmere → home

Week-2 repeat 5.6% engaged vs 2.1% all; cashmere repeats least, 13.7% (Cohort, A6)

Lever 3 Never pay twice

Stop paying for ads that reach buyers Quince can message

★ **Never Pay Twice Engine:** CJA audiences become daily ad suppression lists

Retargeted buyers repeat no better than organic: 23.0% vs 23.4% (A3b)

NO NEW MONEY

A: $2–3M from the $6M owned line
B: inside the $14M retargeting line
Nothing else moves without a holdout

IMPACT: THE CASE'S TARGETS

90-day repeat 24% → 30%+
Blended CAC −10% or better
Needs ~29% of buyers moved into the app, plus category and cart lift (appendix 22)

ALL THREE CONSTRAINTS MET

- **No budget increase**
- **No price-led retention**
- **Grounded in Adobe CJA**

Source: case section 3, Exhibits I, J; Adobe CJA (A2, A3b, A6, Cohort Table), appendix 9–13.

Rented reach is getting costlier just as demand weakens

Quince G27

Four forces reshaping how DTC brands reach customers

US online apparel, accessories and home: ~$180B, growing mid-single digits (case)

Signal loss

Only 35–50% of iOS users allow tracking (Adjust; AppsFlyer, 2025)

So what: **Retargeting sees, and proves, less**

Platforms automate

Meta defaults to Advantage+; TikTok US has new owners (Jan 2026)

So what: **Less control, more platform risk**

Reach costs more

Meta price per ad +12% YoY (Q2 2026)

So what: **Every new customer is dearer**

Cautious consumer

Sentiment at record lows in 2026 (UMich); tariffs lift apparel prices

So what: **Every buyer kept matters more**

The industry's answer

Case Exhibit B; Gordon et al. (2019)

First-party data wins
Own the customer, escape signal loss

Measure by experiment
Attribution can miss true lift by far

Privacy tightens
CCPA-style laws limit identity use

Where Quince is exposed
Retargeting is templated ads on Meta and Google; email is batch-and-blast (case section 1)
CAC $48 → $62 (+29%); repeat 24% vs 30–35% (s. 3)

Reach is moving from rented platforms to first-party relationships; Quince is still built on rented reach

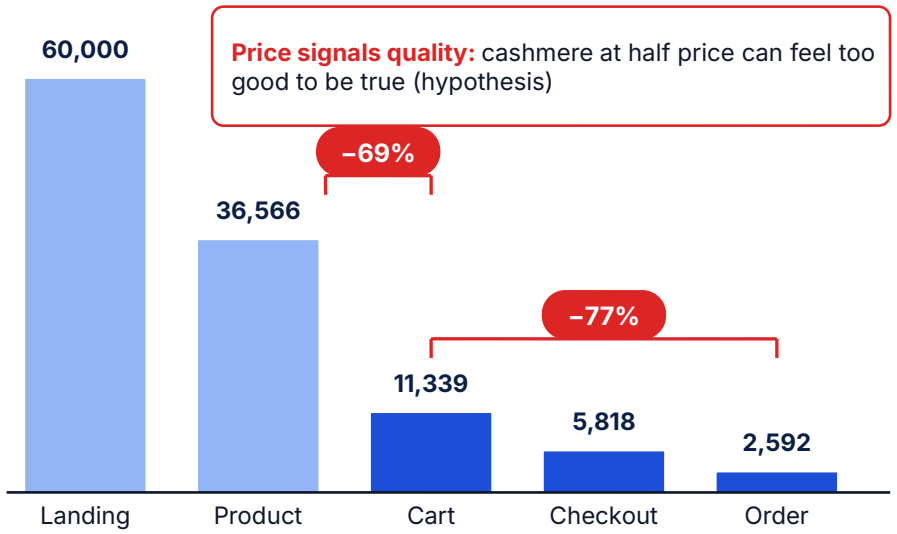

Source: case sections 1–2, Exhibit B; Adjust, AppsFlyer (2025); Meta Q2 2026 results; TikTok USDS JV (Jan 2026); UMich (2026); Cotton Inc. (Jun 2026). Links in appendix 27.

Spend sits on rented reach; repeat comes from engagement

Quince G27

Where the funnel breaks

People at each step (Fallout)

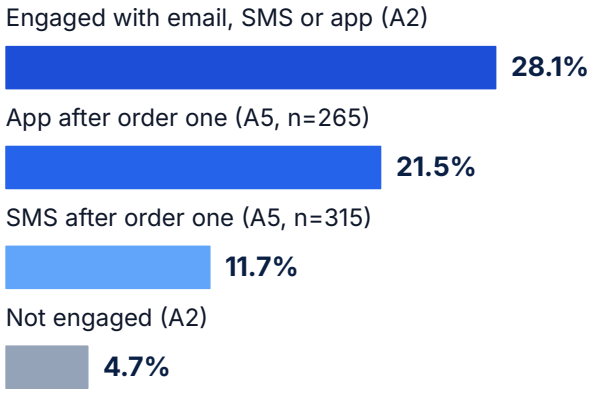

Price signals quality: cashmere at half price can feel too good to be true (hypothesis)

Only 1 of ~5,500 cart paths that stop before checkout gets an email next (Flow)

Who comes back

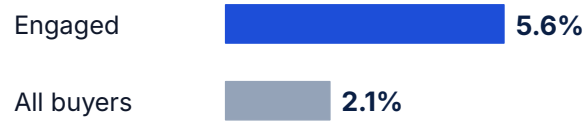

Repeat rate in the CJA window

24.5% of buyers engage, yet they are **66%** of repeat buyers (A2)

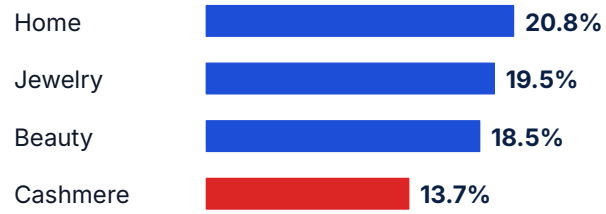

When, and what next

Repeat orders in week 2 (Cohort)

Half of engaged repeats land in weeks 1–4

Repeat by category touched (A6)

Cashmere: touched by 40.7% of buyers, repeats least

Where the $120M goes

FY2026 (Exhibit G)

5% owned: $1.43 per active customer (A, G). **$31** retargeting CAC counts sales that would happen anyway (D)

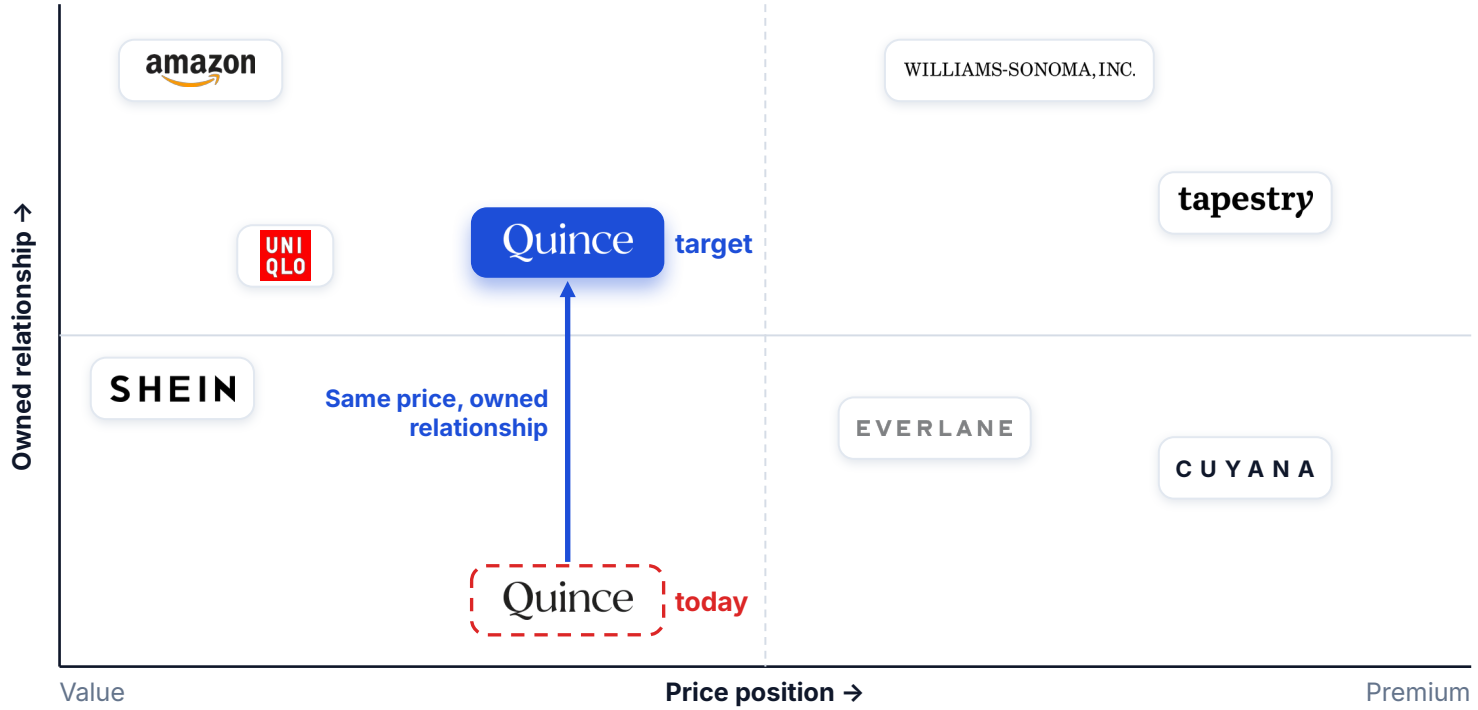

Reach abandoners within hours, every buyer at delivery, engaged buyers in weeks 1–4

Source: Adobe CJA, Quince Case Data View, 1 Jan–30 Apr 2026 (Fallout A1, segments A2/A5, Flow A4, Cohort Table, A6), appendix 9–13; case Exhibits A, D, G. CJA repeat covers ~3 months, so it is used for relative gaps, not vs the case's 24%.

Price is copyable; M2C cost plus owned reach is not

Quince G27

Price position vs depth of owned customer relationship (team judgment)

Shein: value, now buying Everlane · Williams-Sonoma, Tapestry: premium, relationship-led · Amazon: data at scale

1 Rivals already invest in retention

Cuyana loyalty, Everlane email/SMS, Uniqlo app, Amazon real-time retargeting (Exhibit M)

2 Owned reach alone isn't a moat

Everlane's mature program didn't save it: Shein agreed to buy it (May 2026). Quince pairs owned reach with M2C cost.

3 If rivals escalate, hold price

Ad prices are already rising (Meta +12% per ad, Q2 2026); suppression shrinks the exposure. Answer with proof and access, not price.

→ A rival can match a discount overnight; it can't match M2C cost and a consented customer base

Source: case Exhibit M and section 7; NPR/Michigan Public on Shein and Everlane (May 2026); Meta Q2 2026 results. Map positions are team judgment.

Identity stitching works; activation and lifecycle are the gaps

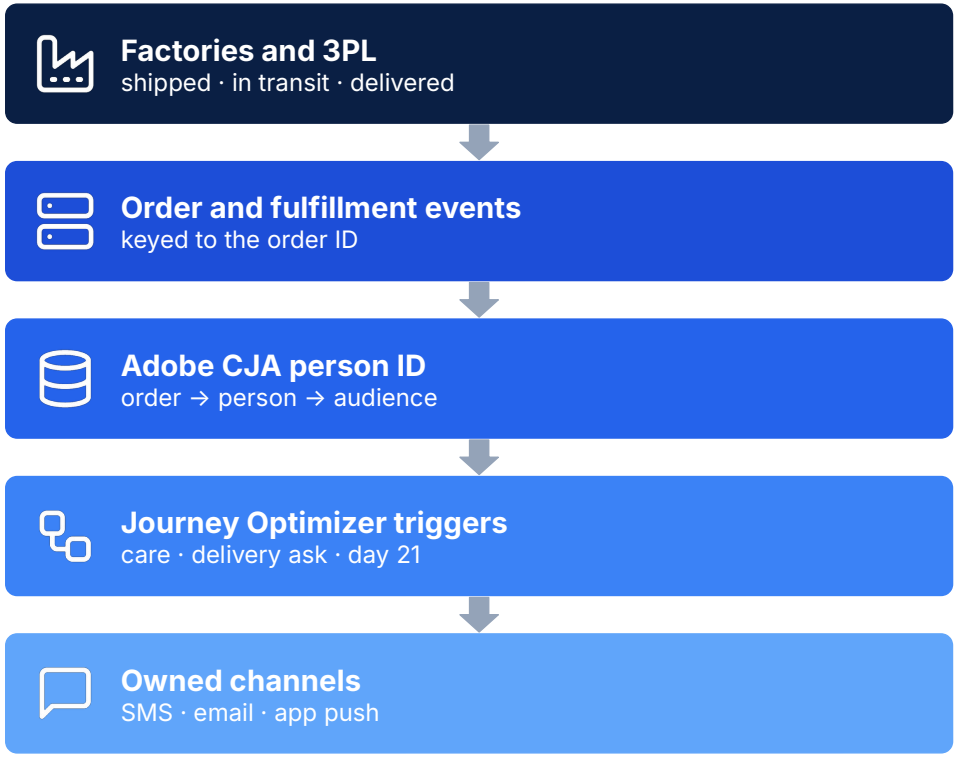

Quince G27

Readiness against what the plan needs

Data and identity	Partial	Person ID is stitched (Exhibit L); fix owned-event logging and attribution set-up in month 1
Activation	Gap	Real-Time CDP (ads) and Journey Optimizer (messages), from Option A's $2–3M
Lifecycle and creative	Gap	Email is batch-and-blast: lifecycle team and creative, same budget
Growth–analytics	Gap	CJA is new: one weekly council, one holdout rule
App	Partial	22% of sessions (Exhibit A): add tracking and restock alerts
Shipping events	Partial	Quince ships direct: confirm 3PL events carry the order ID
Privacy and consent	Partial	CCPA: split transactional and marketing SMS consent

How shipping events become journeys

Material Journeys, end to end (appendix 24)

Quince owns the data; the build is activation, lifecycle people and one weekly decision rule, all inside the owned line

Source: case sections 1, 3, 4, 7; Exhibits A, I, K, L. Status is team assessment against the case. Adobe CJA analyses audiences; activation runs through Real-Time CDP or Journey Optimizer (Adobe Experience League).

Prove in 90 days, then scale over 18 months

Quince G27

PROVE Months 0–3 · B + Lever 1 → **BUILD** Months 3–9 · Option A → **SCALE** Months 9–18 · C reallocates

Option C measures from day one: every move runs against a randomized holdout

Budget: Suppression inside the $14M retargeting line; activation set-up from Option A's $2–3M

- Month 0–1: CJA audiences live in Real-Time CDP; fix owned-event logging
- South pilot, 10% holdout (Exhibit N)
- Checkout SMS, app tracking, Saved Cart, Passport, Restock-First

Budget: Rest of Option A's $2–3M (inside the $6M owned line): team, creative, journeys

- Material Journeys, Care Calendar, Gift Ledger, Insider (app. 20)
- Proof Creators, Lookalikes; shipping events → CJA

Budget: Money crosses lines only where holdouts prove incrementality

- Midwest (highest AOV) → West, Northeast → Canada (Exhibit N)
- Beauty Refill, Second Life, Fitting Room pop-up (app. 20)

Gate 1 · month 3

Beats holdout on 30-day repeat; new customers hold

Gate 2 · month 9

App installs on pace for ~29% of buyers (app. 22); retargeting holdout read

Target · month 18

Repeat 30%+, blended CAC −10% (case targets)

Track opt-ins · cart recovery · week-2 repeat → **90-day repeat · blended CAC · incremental orders per retargeting $**

Monday: approve the South pilot, the suppression rules and the weekly CJA council

Source: case Exhibits I (cost and time to impact), N (regions), section 3 (targets). Pilot design and gate rules are the team's (appendix 26).

Mar 22 - Mar 28	31												

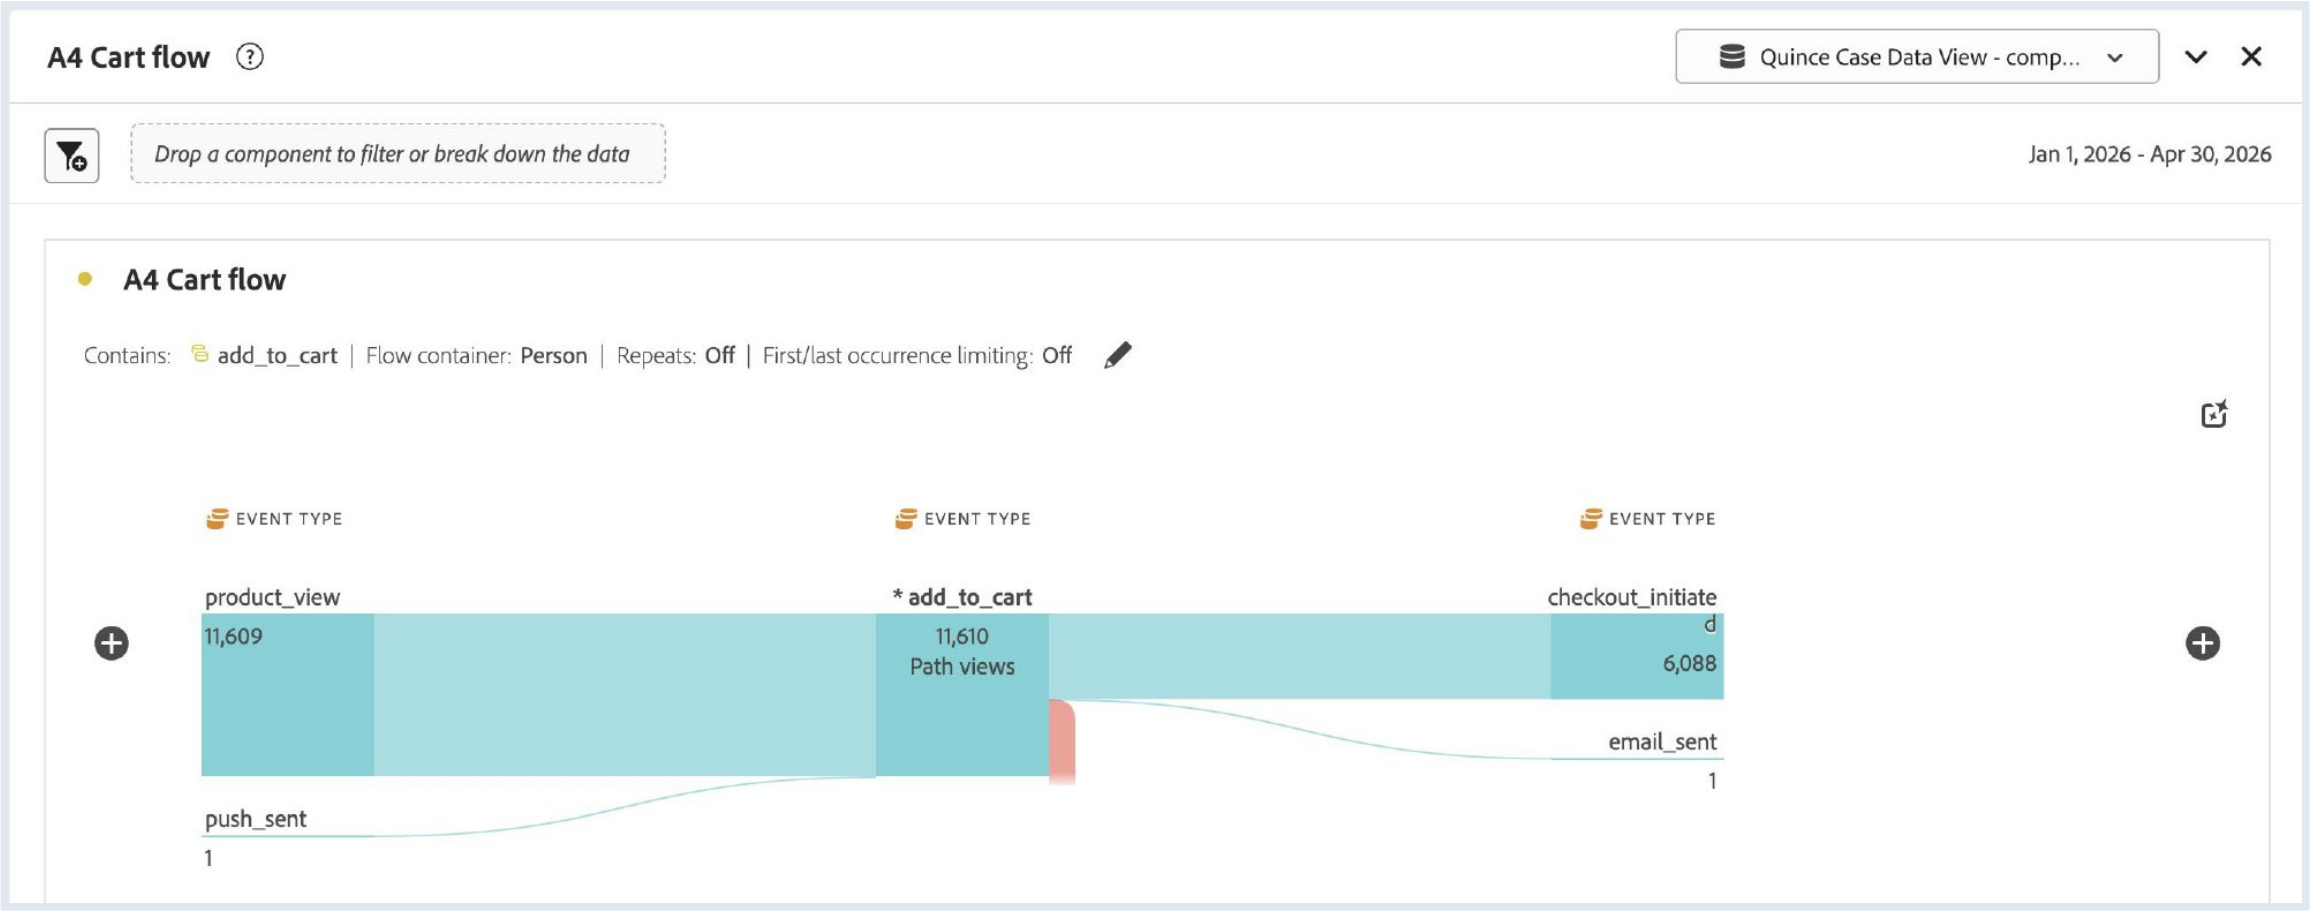

Engaged buyers (inclusion segment)

Engaged buyers repeat 2.7× more in week 2 than all buyers (5.6% vs 2.1%), and half their repeats land in weeks 1–4; cohorts are small (~48 engaged buyers a week), so read as directional

Source: Adobe CJA, Cohort Table, inclusion and return Orders ≥ 1, weekly, 1 Jan–30 Apr 2026; right panel uses the Engaged inclusion segment.

Flow: almost no message follows an abandoned cart

Quince G27

Of 11,610 cart paths, 6,088 continue to checkout and only 1 is followed next by an email: a basic cart-recovery journey is the fastest win

Source: Adobe CJA, Flow from add_to_cart (next step), Person container, 1 Jan–30 Apr 2026. 11,610 = path views; 11,339 = people (Fallout).

Segments: engagement after order one is linked to repeat

Quince G27

A2 · Repeat by engagement (any time)

A5 · Engaged after order one

A2 Repeat by engagement

Segments Page: 1/ 1 Rows: 400 1-4 of 4	Buyers People Jan 1 – Apr 30 2,592	Repeat buyers People Jan 1 – Apr 30 271
1. Engaged	636 24.5%	179 66.1%
2. SMS engaged	319 12.3%	59 21.8%
3. Email engaged	74 2.9%	74 27.3%
4. App engaged	266 10.3%	69 25.5%

A5 Engaged before repeat

Segments Page: 1/ 1 Rows: 400 1-4 of 4	People Jan 1 – Apr 30 674
1. Order then App	265 39.3%
2. Order then App then Order	57 8.5%
3. Order then SMS	315 46.7%
4. Order then SMS then Order	37 5.5%

Engaged buyers are 24.5% of buyers but 66% of repeaters (A2 overstates: owned visits log only at purchase); after order one, app users still repeat 21.5% vs 11.7% for SMS (A5, the cleaner test)

Source: Adobe CJA, freeform tables with engagement segments (A2) and sequential segments after order one (A5, n = 265 app, 315 SMS), 1 Jan–30 Apr 2026.

Each option covers another's weakness, so we blend all three

Quince G27

B Option B

Paid precision and suppression

- ✓ Results in weeks, $0 incremental
- ✗ Alone: High signal-loss exposure; builds no lasting relationship

A Option A

Owned lifecycle precision

- ✓ Lowest cost per touch; insulated from ATT
- ✗ Alone: Reach capped by today's list: 1 in 4 buyers engaged

C Option C

Attribution-based reallocation

- ✓ The lasting decision framework
- ✗ Alone: 6–12 months to trust; high change risk

Proves fast
Savings held in the $14M line until a holdout proves them

Builds it
Capture grows the list; journeys earn order two

Proves it
Runs from day 1 and decides every tranche

B gives fast proof, A's owned reach cuts B's signal-loss exposure, and C's holdouts remove the measurement risk of both

→ **Scale only what beats the CJA holdout; stop anything that doesn't and return to plan**

Source: case section 4 (Options A, B, C), Exhibit I (cost and timing) and Exhibit K (risk matrix); team analysis.

Four branches, three levers, one thread

Quince G27

Why is 90-day repeat 24% and blended CAC $62 on a fixed $120M?

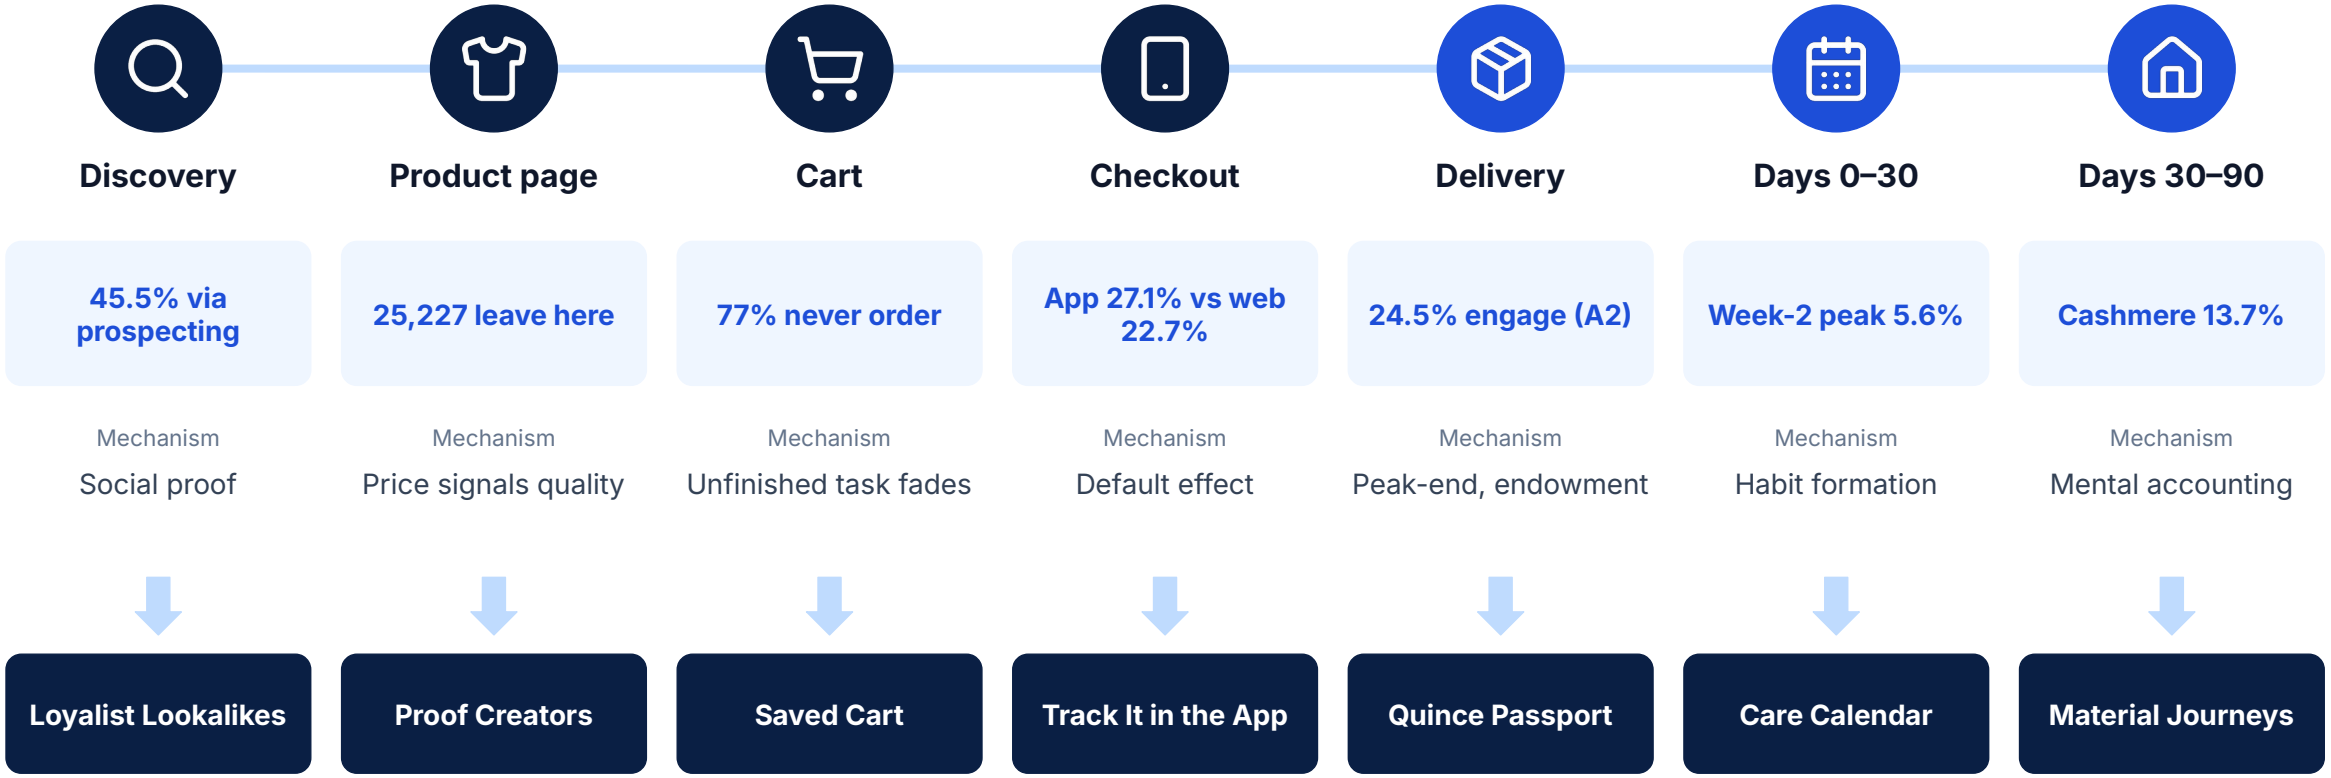

Money	**Spend may pay for demand that comes anyway** Retargeted buyers repeat no better than organic: 23.0% vs 23.4% (A3b); a holdout will tell	**Never pay twice**
Customer mind	**One-product buyers** Cashmere is touched by 40.7% of buyers but repeats 13.7% (A6)	**Win the Golden Month**
Customer journey	**The purchase leaks** 77% of cart adders never order; 1 of ~5,500 cart paths stopping before checkout gets an email (A1, A4)	**Capture every buyer**
Brand trust	**Found, not yet trusted** 25,227 people leave after a product view (A1)	**Trust thread, all levers**

→ **Repeat = engaged share × engaged repeat + non-engaged share × non-engaged repeat; CAC = $120M ÷ new customers**

Source: team analysis; Adobe CJA panels A1–A6 and A3b; case Exhibits D and G.

Seven moments decide whether a first buyer returns

Quince G27

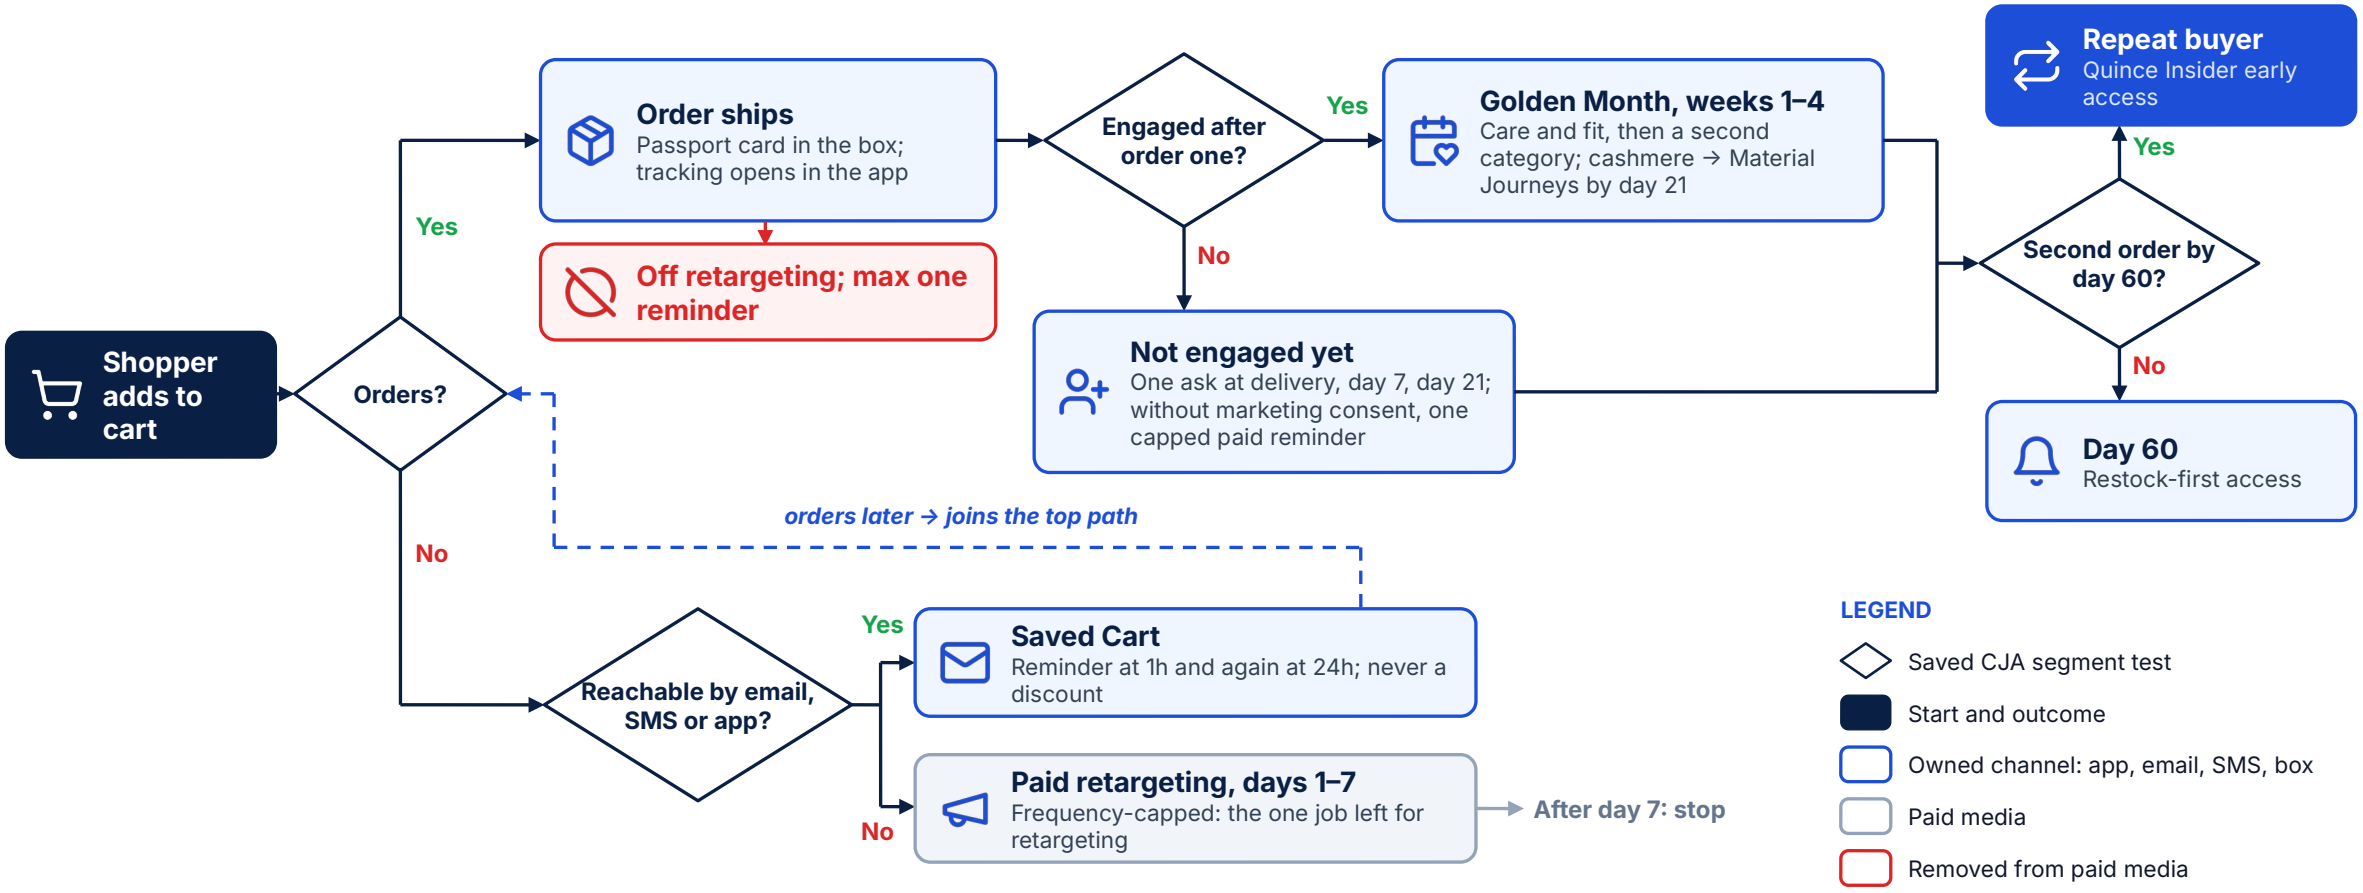

Trust peaks when the parcel opens: Quince asks for the relationship then, and never with a discount

Source: Adobe CJA panels A1, A2, A4, A5, A6 and Cohort Table; mechanisms are hypotheses the pilot tests.

Every cart adder follows exactly one path, owned first

Quince G27

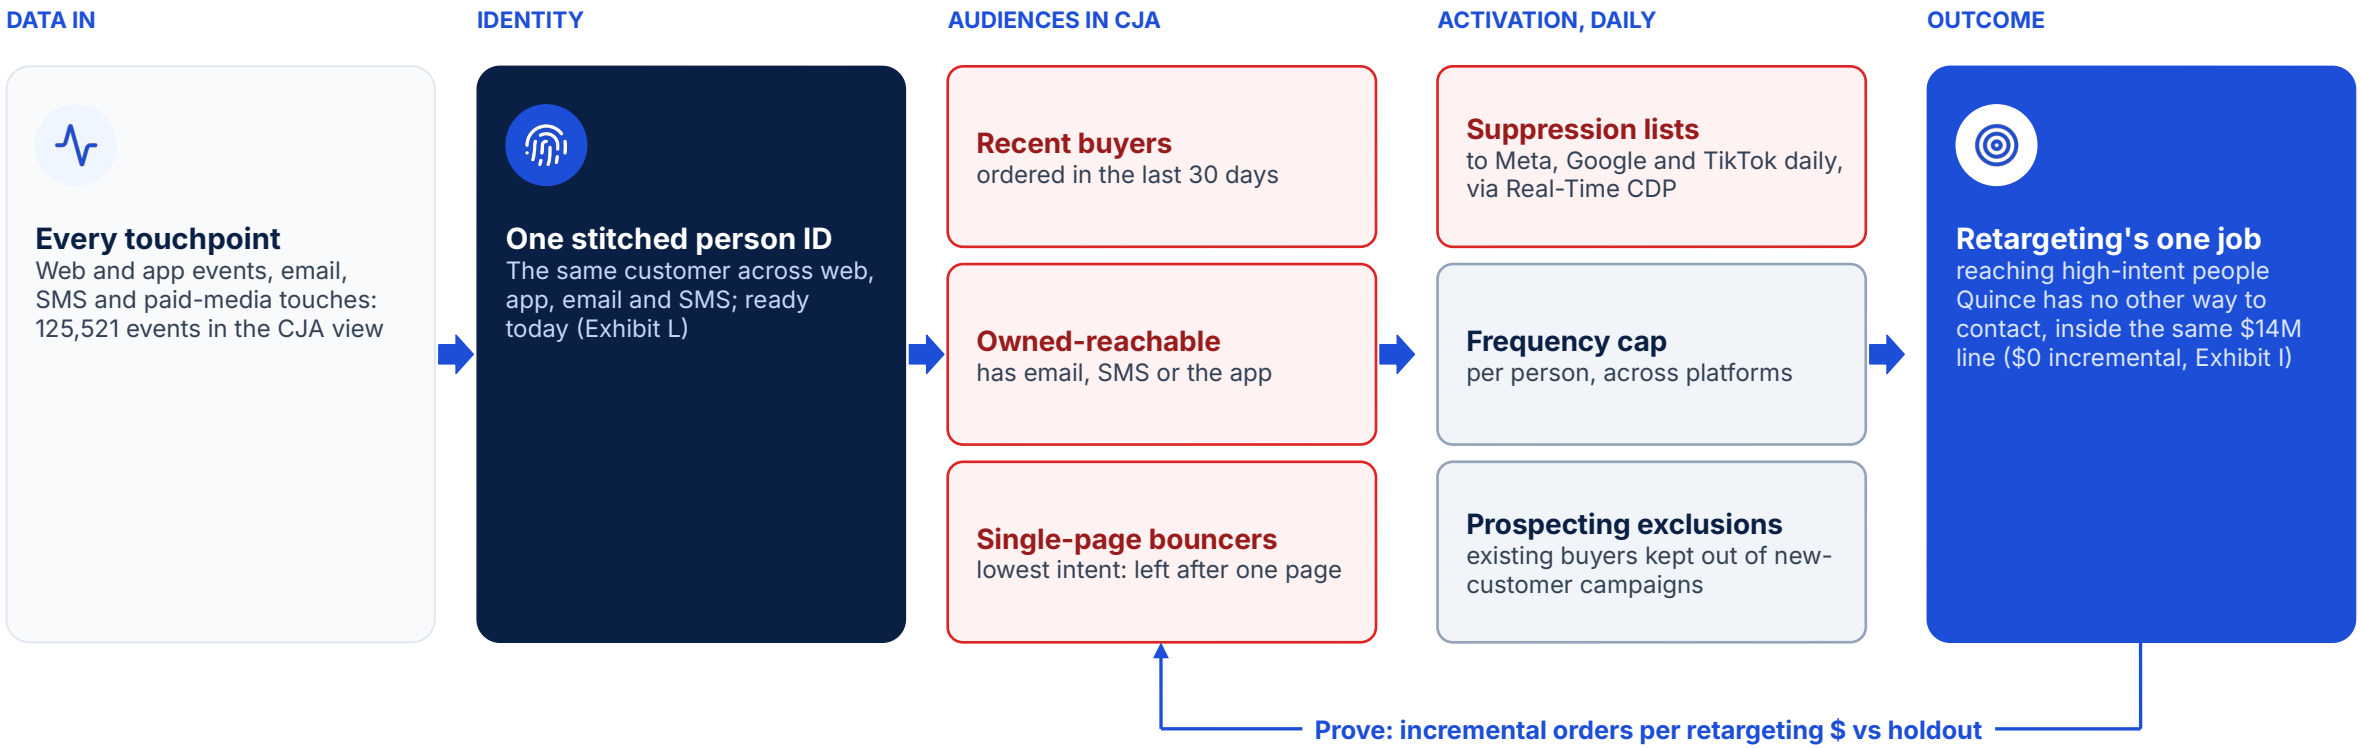

Each diamond is a saved CJA segment, so one rule drives both the message and its measurement

Source: Adobe CJA segments (A1, A2, A4, A6, Cohort Table); team targeting design. Message timings are pilot design choices, tested against the holdout.

Never Pay Twice: stop buying customers Quince already has

Quince G27

Why test it: retargeted buyers repeat no better than organic (23.0% vs 23.4%, A3b) and attribution barely moves, so only a holdout can prove retargeting's value; the prospecting budget, which brings 45.5% of buyers, is unchanged.

Suppression stops paying for customers Quince can already message; the prospecting budget is unchanged

Source: Adobe CJA, Quince Case Data View (125,521 events, 1 Jan–30 Apr 2026), segments A3b and A1; case Exhibits D, I, L; team design.

One CJA loop runs every lever, every week

Quince G27

RHYTHM Weekly council

5 Reallocate

Option C

Move money across lines only when the holdout proves it; otherwise it stays

OWNER **CMO + CFO**
RHYTHM Gates: months 3, 9

What CJA proves sets the next diagnosis and the next move

Why it matters: Option C alone takes 6–12 months to trust (Exhibit I). Running it as a weekly loop from day one lets Options A and B act within weeks, with C deciding every budget move.

Growth and analytics share one workspace, one holdout and one decision rule

Source: case section 4 (Options A, B, C), Exhibits I and L; owners and rhythm are the team's operating design.

Fourteen programs, three flagships, zero discounts

Quince G27

1 Capture every buyer

★ Quince Passport
A card in every box: scan to register the piece for care tips, easy exchange and restock alerts; it asks for SMS or the app

Track It in the App
Tracking opens in the app; app converts carts 27.1% vs 22.7% on web (A1)

Saved Cart
Reminders within hours of abandonment, with fit and return promises, never a discount

Restock-First Waitlist
"Text me when it's back" on real sell-outs: a reason to opt in

2 Win the Golden Month

★ Material Journeys
Before arrival, how the material is made and how to care for it (no supplier names); by day 21, a second category (cashmere → home)

Care Calendar
Seasonal care reminders keep cashmere buyers in touch

Gift Ledger
Customers save gift dates; picks arrive 14 days before

Quince Insider
Early access earned by engagement, not spend

Beauty Refill
Refill reminders timed to each product's use cycle

Cashmere Second Life
Take-back for recycling, rewarded with early access

3 Never pay twice

★ Never Pay Twice Engine
CJA suppression lists, synced daily to Meta, Google and TikTok, remove recent and owned-reachable buyers from paid retargeting

Loyalist Lookalikes
Prospecting seeded on repeat buyers, not one-time buyers

Proof Creators
Wear-tests and fabric close-ups instead of discount codes

The Fitting Room
Members-only pop-up for app users, one metro, one season: try fabrics in person; asset-light, no store

0 discounts

14 programs tested against a holdout

$0 new budget

Source: team strategy. Each program sits in one lever, works on one named behaviour and has a KPI CJA can read. No program uses a price cut.

How the fixed $120M moves: rules, not guesses

Quince G27

LINE (EXHIBIT G)	WHAT CHANGES	EVIDENCE	DECISION RULE
Paid social prospecting $58M	Budget unchanged; existing buyers excluded; lookalikes seeded on repeat buyers	Brings 45.5% of buyers (CJA A3b)	**Moves only if Attribution IQ and a holdout show it is over-credited**
Paid search $22M	Unchanged in the pilot	Brand-keyword ads showed no short-term lift at eBay (Blake et al. 2015)	**Geo holdout on branded terms before any move**
Influencer / affiliate $16M	Briefs shift to proof: wear-tests and fabric close-ups	Hypothesis; 69% product → cart drop (A1)	**No dollar move without a holdout**
Paid social retargeting $14M	Re-aimed inside the line: suppression and frequency caps	Repeats no better than organic, 23.0% vs 23.4% (A3b)	**$0 incremental (Exhibit I); savings stay in the line until the holdout reads**
Email, SMS, app $6M	Option A: $2–3M of this line funds activation platform, lifecycle team, content and CRM	Engaged buyers repeat 28.1% vs 4.7% (A2)	**Funded inside the existing line (Exhibit I)**
Brand / other $4M	Unchanged; The Fitting Room tested only if it fits this line	Asset-light pop-up, no store	**One-season test; stopped if attendee repeat doesn't beat a matched holdout**

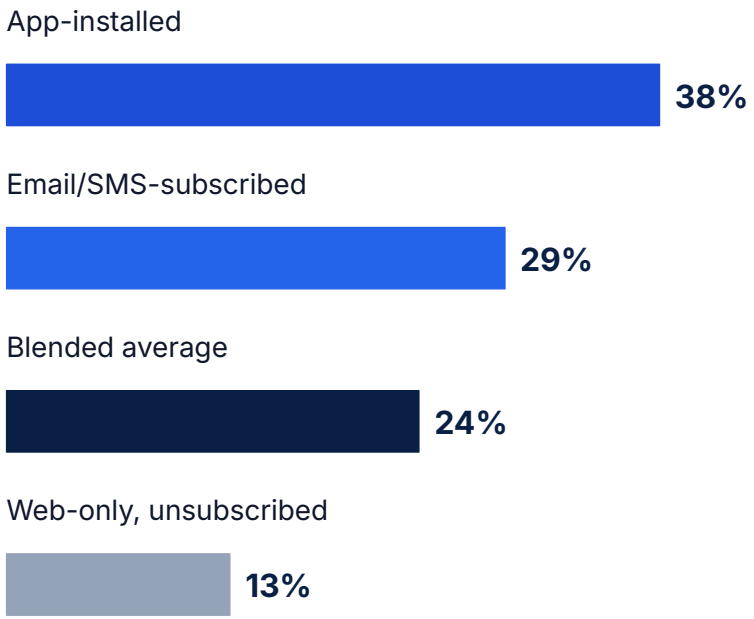

Net change: $0. Money crosses lines only when a CJA holdout proves it, and the holdout sets the amount

Source: case Exhibits G (budget), I (cost by option), D (channel CAC); Adobe CJA A3b, A2 and Attribution IQ. No cross-line amount is set in advance: a CJA holdout result sets it.

What +6 points takes, in the case's own numbers

Quince G27

90-day repeat by engagement (Exhibit E)

What it takes to add 6 points

24% → ~29%

of buyers moved web-only → app

each adds 25 pts (38 − 13); ~21 pts after the A5 selection haircut

37.5% → ~59%

of buyers moved web-only → email/SMS

each adds 16 pts; ~10 after haircut: more than the ≥31% who are web-only

Minimums: Exhibit E's lifts include selection (A2 any time → A5 after order one: app 25.9% → 21.5%, SMS 18.5% → 11.7%). Engagement mix only; category shift and cart recovery add lift on top

WHAT +6 POINTS IS WORTH (EXHIBIT J)

~250,000
incremental repeat orders a year

~$30M
incremental revenue

~$13.5M
contribution at ~45% margin

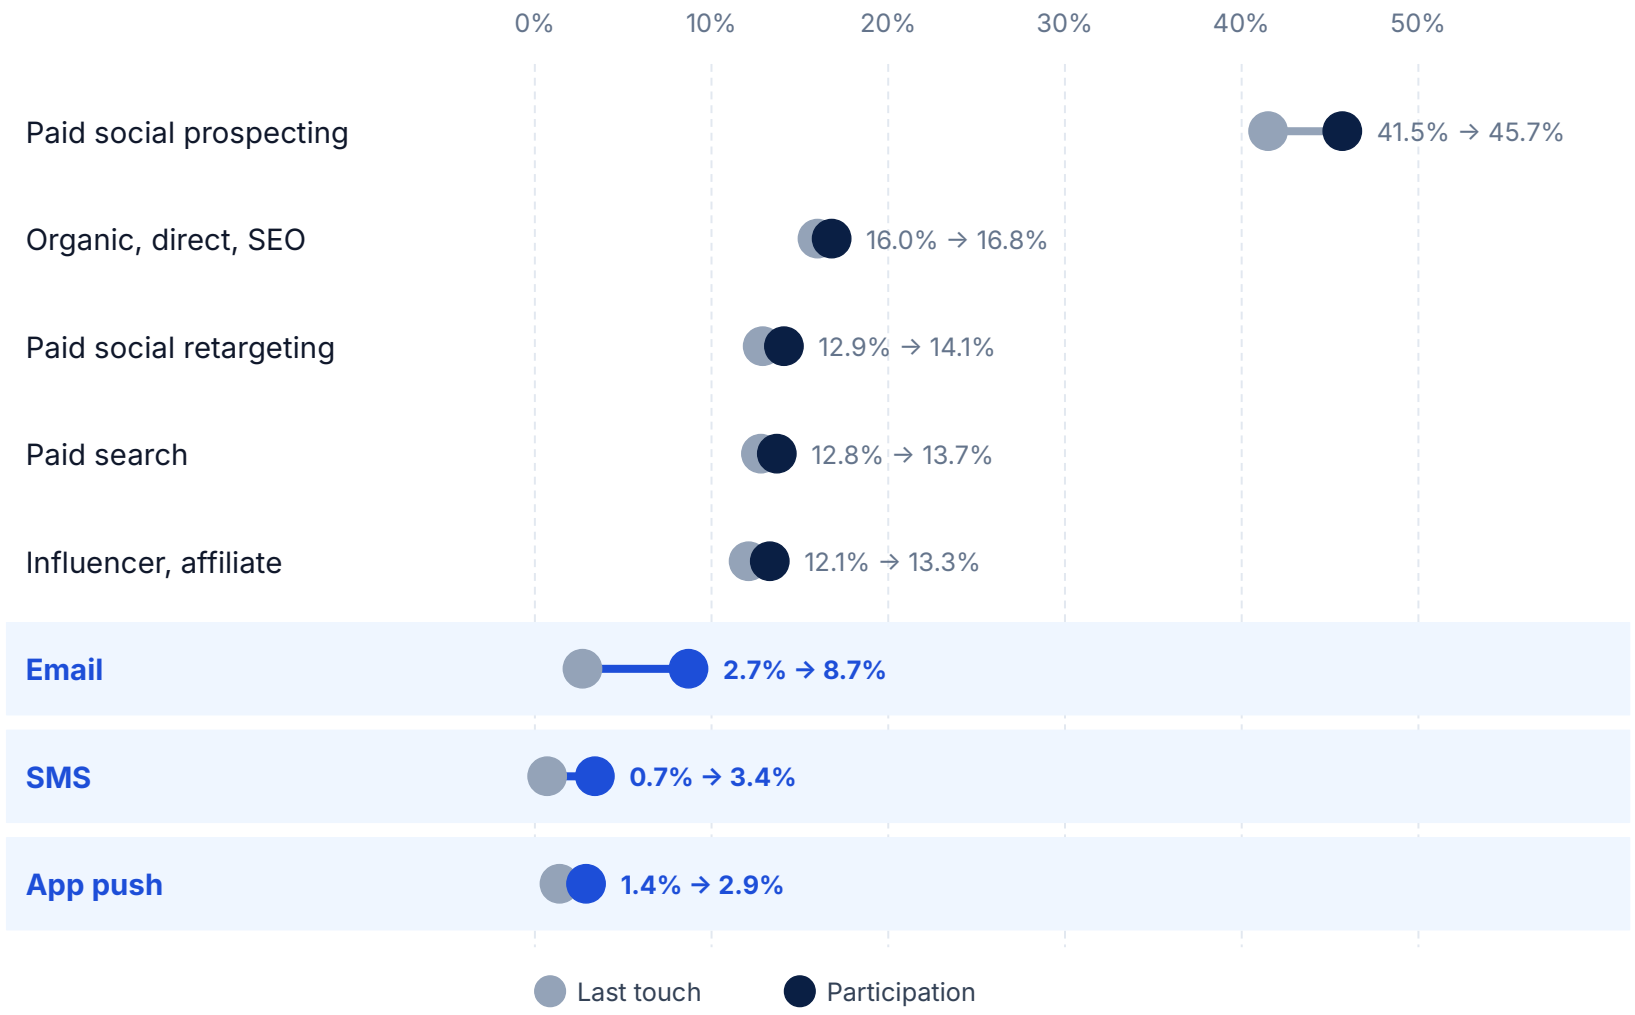

~10–12%
lower effective blended CAC

+6 points needs most web-only buyers moved into owned channels, the app route first: that is why lever 1 comes first

Source: case Exhibits E (90-day repeat by engagement type) and J (impact of a 6-point gain); Adobe CJA A5. Arithmetic on case figures, not a forecast.

Last click credits owned channels as little as a third

Quince G27

4.8% → 15.0%

Owned channels: last-touch credit vs up to 15.0% of revenue they appear in (not additive)

12.9 · 12.4 · 12.5%

Retargeting under last touch, first touch and linear: attribution can't settle it; holdouts can (Gordon et al. 2019)

Source: Adobe CJA Attribution IQ, Order Revenue ($337,044), Marketing Channel, Person container, 90-day lookback, 1 Jan–30 Apr 2026.

Material Journeys reuses Quince's existing shipping events

Quince G27

Factories and 3PL partners
Shipment created · customs cleared · out for delivery · delivered

↓

Order and fulfillment events
One event stream per order, keyed to the order ID

↓

Adobe CJA: stitched person ID
Order ID → person; audiences; holdout assignment

↓

Activation and journey triggers
Pre-arrival material and care guide · delivery-day Passport and app ask · day-21 next category

↓

Owned channels
SMS · email · app push, under one frequency cap

Build sequence, months 3–6 (after Gate 1)

1 Month 3–4 Map and consent

- List the shipping milestones factories and 3PLs already emit
- Agree one order-ID key with operations
- Split transactional and marketing SMS consent with Legal (CCPA)

2 Month 4–5 Connect

- Stream events into CJA: order ID → person ID
- Build audiences: in transit, delivered, day 21 with no second order
- Assign the 10% randomized holdout

3 Month 5–6 Launch and read

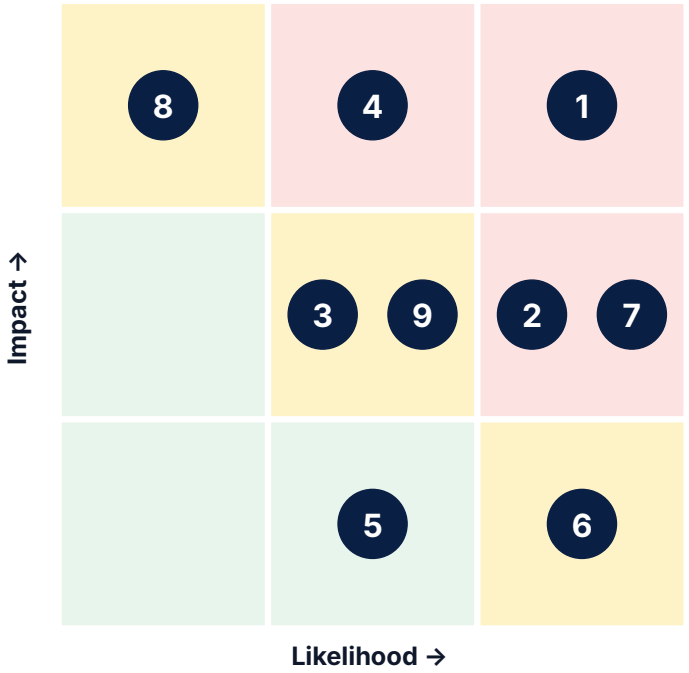

- Pre-arrival guide: how the material is made and cared for
- Delivery-day Passport and app ask; day-21 second category
- Read results against the holdout every week

→ The tech lift depends on one thing: 3PL shipping events keyed to an order ID

Source: case section 1 (M2C model), Exhibits L and N; team build plan. Month ranges are the team's plan, not case figures.

Nine risks, each with a mitigation and an early warning

Quince G27

1	**Selection bias inflates lift**	**Mitigation:** Randomized 10% holdout **Early warning:** holdout gap shrinks
2	**Channel owners resist cuts**	**Mitigation:** Scorecards on incremental revenue **Early warning:** escalations at the weekly council
3	**Message fatigue, unsubscribes**	**Mitigation:** Fewer, triggered sends **Early warning:** unsubscribes above pre-pilot rate
4	**Consent and privacy (CCPA)**	**Mitigation:** Transactional and marketing consent split **Early warning:** consent complaints
5	**The Fitting Room doesn't pay back**	**Mitigation:** One-season test **Early warning:** attendee repeat no better than a matched holdout
6	**Platform or signal shock**	**Mitigation:** More owned reach; first-party lists **Early warning:** CPM or match-rate drop
7	**Creative fatigue**	**Mitigation:** Fresh creative funded by Option A **Early warning:** falling click and conversion rates
8	**Fewer new customers**	**Mitigation:** Prospecting budget unchanged; exclusions tested **Early warning:** weekly new customers vs plan
9	**Activation set-up slips**	**Mitigation:** Start in month 0; manual list upload as fallback **Early warning:** suppression lists not live by week 6

Source: case section 7 and Exhibit K; likelihood and impact positions are team judgment.

Every number in this deck, and where it comes from

Quince G27

Case packet (illustrative)

- $120M budget and its six lines (Exhibit G); 4.2M active customers (A)
- CAC $48 → $62; repeat 24% vs 30–35% peers; targets +6 pts and −10% (section 3)
- Cart abandonment ~78% vs ~70% benchmark (C); retargeting CAC $31 (D)
- Repeat 38% / 29% / 13% by engagement (E); ~250K orders, ~$30M, ~$13.5M, ~10–12% CAC (J)
- Option A $2–3M inside the $6M owned line; B $0 within $14M; time to impact (I)
- Regions (N); ~$180B market (section 2); app 22% of sessions (A)

Adobe CJA (our sandbox)

- 60,000 → 2,592 people; 69% and 77% drop-offs; 25,227 = 36,566 − 11,339 (Fallout)
- 11,610 cart paths: 6,088 to checkout, 1 to email (Flow)
- 28.1% vs 4.7%; 24.5% of buyers, 66% of repeaters; 10.5% overall (A2)
- App 21.5% (n = 265), SMS 11.7% (n = 315) after order one (A5)
- Week 2: 5.6% vs 2.1%; half of engaged repeats in weeks 1–4 (Cohort)
- Category repeat, cashmere 40.7% (A6); 23.0% vs 23.4%, 45.5% (A3b); 4.8% vs 15.0% (AIQ)

Public data (cited)

- ATT opt-in 35% (Adjust, Q2 2025) to 50% (AppsFlyer, Apr 2025)
- Meta average price per ad +12% year on year (Q2 2026 results)
- Meta Advantage+ defaults (2025); TikTok US joint venture (Jan 2026)
- Consumer sentiment record low (UMich, 2026); apparel prices up with tariffs (Cotton Inc.)
- Shein agreed to buy Everlane (May 2026); CJA activation via Real-Time CDP (Adobe)
- Gordon et al. (2019); Blake, Nosko and Tadelis (2015)

Derived, or team design

- +29% = $62 ÷ $48; $1.43 = $6M ÷ 4.2M; 60% = ($58M + $14M) ÷ $120M
- 4.6× = 21.5 ÷ 4.7; 2.7× = 5.6 ÷ 2.1; a third = 4.8 ÷ 15.0; ~5,500 = 11,610 − 6,088 − 1
- +6 pts: 6 ÷ 25 = 24% (app), 6 ÷ 16 = 37.5% (email/SMS); ~29% and ~59% after A2→A5 haircuts; web-only ≥ 31% (38a + 29s + 13w = 24)
- Pilot design, not forecasts: 10% holdout, South region, gates at months 3 and 9
- Timing (1h, 24h, delivery, day 7, 21, 60); 30-day recent buyers; gift picks 14 days ahead
- Gate pass = minimum effect pre-registered by Analytics; no reallocation amount assumed

Case figures are the packet's illustrative estimates, never Quince disclosures. CJA figures come from the team's sandbox, 60,000 people, 1 Jan–30 Apr 2026.
